Now let's begin again...

Chapter I

Time and the Crash

Me: Hello God, it's been a while.

God: Yes, if you keep a watch on time.

Me: What do you mean?

God: Why have you been watching the clock so closely these days? Are you expecting something to happen on a certain timeframe?

Me: Yes. I guess I have been. The last time we talked we were discussing the timeframe for the End Game and we talked about the upcoming Shemitah. I suppose that that's what I've been counting down. That's what I've been waiting for.

God: I see. So you've been hoarding your nuts for the coming storm.

Me: Yes, that's a good way to put it, but I think I'm ready now.

God: On the physical side you have been ready for many years but what about the non-physical preparedness? Are your affairs in order?

Me: What do you mean?

God: The upcoming changes are not only in the physical realm. You must prepare your emotional side, your spiritual side and even your metaphysical side.

Me: How in the world can I prepare all of that?

God: Ah, but that is the REAL challenge and the REAL test that you are giving yourself. You are not running through all the potential scenarios when it comes to the change.

Me: What kind of scenarios?

God: What if not only the financial system is turned upside down but your entire society fractures or you are forced to "head for the hills" as your planet readjusts. Will you be in the right place at the right time? What if you end up out on the road with nothing but what you carry on your back? What good is all the gold, silver, dried food and supplies if circumstances force you to be mobile?

Me: But there's nothing I can do about that. I'd just be out of luck in the wrong place at the wrong time.

God: But you are the one creating this experience so it would be your own doing to experience the changes in a position that you had not prepared for. If you think about it, wouldn't that type of scenario be even more challenging for you and give the highest chance at overcoming adversity and experiencing something truly exceptional?

Me: I suppose so but I've pretty much had my fill of adversity over the past 15 years so I think I'll pass on being at the wrong place at the wrong time this go round.

God: As you choose Bix.

Me: Wait. If I do ultimately put myself in that kind of position how should I cope with it as you are right, I have not prepared for something like that.

God: You would be well served to listen to your gut instincts and feelings. Embrace the changes even if they are not what you expect. Adapt and change with the changing environment. Don't hold on to the past as the future will necessarily be different. It is what you have decided the future to be. This has rung true throughout human history. Socrates said, "*The secret of change is to focus all of your energy, not on fighting the old, but on building the new.*" Keep this idea in mind as you move forward.

Me: Will do. It all comes back to what we discussed earlier about the meaning of life and how overcoming challenges and adversity are the greatest chances to experience the joys of living.

God: Yes. They are.

Me: Ok. Let's get back to the Shemitah – the Seven Year Cycle. Is it a supernatural religious thing, a natural progression of human nature or a man made thing?

God: All of the above. Remember, you are creating this experience and there are reasons that you have chosen to experience these cycles. It is built into many religions because you put it there, it is human nature because you designed it that way and it is a man made thing because it takes the actions of others to execute the plan. All of these work in harmony to ensure that you experience what you have chosen to experience.

Me: So what we experience as the Shemitah is actually my own doing on all levels.

God: Yes.

Me: If this is true then why is it mainly in the financial realm that the Shemitah manifests? Why wouldn't all other things relevant to our existence experience the 7-year cycle?

God: They do but at this time in your evolution you have placed the highest emphasis on the financial realm. You put it above all else and it has taken control of your life. It rules your existence from the time you wake up until the time you "hit the hay". You work to satisfy it. You spend your time

getting to and from your job, working at your job, looking to improve your job and ultimately judging your self-worth by your financial successes.

Me: It sounds crazy when you put it like that! It sounds like a huge problem that is very difficult to change.

God: It is what you have chosen in the past but now you are choosing to change all that and the coming chaos will help you discard it.

Me: So by changing the emphasis we put on the financial world we can experience this existence in a different way?

God: Yes, but there will be people who want to cling to the past structures and those who will try to protect them. They are mostly in control of the largest financial institutions in the world and they control most people in government, to an extent. Those in power collude with each other to keep the current financial system going even though they know it is not sustainable.

Me: So how could it ever end? They control it and run it to their desires and their goals.

God: Everything ends Bix. Everything has a beginning and an end – a start and a finish. It's the way you have designed this experience and the reign of the current system is almost over.

Me: Even if those in power don't want it to end?

God: Yes, the system has become "top heavy" as the power, money and influence has been concentrated into the hands of the few at the top and the system is wobbling because of it. Like any structure, you need a very strong base to support it and the current base is crumbling away. It takes the mass of humanity to support the top of the structure and the base is either crumbling under the weight of supporting those in power or walking away from the system all together. It won't last much longer.

Me: Let's get back to the Jewish Shemtah and how it will play out this year. From what I understand it is the seventh Shemitah. The seventh of the seven-year cycles and it is supposed to be the Year of Jubilee where all debts are forgiven. Is this true?

God: Yes.

Me: But there's a big problem with this as all our currencies are DEBT based these days.

God: Yes, it should make for a very interesting Shemitah year don't you think?

Me: That's an understatement! If all debt is forgiven then so are all debt based assets...which is almost everything in the way our current system is constructed!

God: Yes, and therein lies a huge problem for the believers in the Jewish Shimitah.

Me: What do you mean?

God: In the past when debts were forgiven in the Shemitah Year the assets were returned to their original owners. But in the current system most of the assets are also debt. Even your money is debt. This system relies upon the continued performance and the underlying survival of a 3rd party - a bank, a brokerage house, a company, a person - they must all stay solvent to successfully keep the system going.

Me: That's a very big difference between the past Shemitahs and the upcoming one. The majority of what we call ASSETS will be washed away with the debt because they are nothing more than debt based assets!

God:Yes.

Me: And everything that requires reliance on a 3rd party will be wiped away as well when counterparties fail, right?

God: Yes.

Me: Obviously this includes all derivatives but it also includes all stocks, bonds, checking accounts, savings accounts, etc. as they are all reliant upon the survival of not only your bank or brokerage house, but also those participating in the system to stay insolvent in order to cash in their investments.

God: Of course. And don't forget that the very currencies that the world will try to cash-out into will also be destroyed, as they are mainly electronic debits and credits floating around on the computer servers of the banks.

Me: No wonder those that run the system are afraid of the transition and why they've been delaying it for so long.

God: Yes. The transition will be the very difficult for those who have bought into the system the most. Those who have “done the right thing” by working hard, saving for their retirement and playing by the rules will be out of luck along with everyone else going forward.

Me: It doesn't seem fair for those who played by the rules.

God: Remember, they too have chosen their own experience. If you think about it, they will likely be the ones to thrive after the system breaks down as they have learned how to be disciplined, how to work hard and how to do the right thing...it's just that the “right thing” is now changing.

Me: I suppose but they will be mad that they have done all that work and not been able to enjoy the fruits of their labor.

God: They will feel like that at first but change is what they were really preparing themselves for.

Me: Ok...if you say so.

God: No Bix. You say so! This is your experience, your creation. Remember?

Me: Yes, of course.

END

Chapter II

The Chaos and The Transition

Me: Tell me what will happen when the current system crashes.

God: That is difficult as you are the decider and there will be many options.

Me: I know but what will it be like when it actually happens? Will we know the moment it happens? How will the markets, governments and people of the world react?

God: There are set patterns that can be observed that cross over all these entities you are asking about. Humans are programmed to deal with

certain stresses in certain ways and it is very likely that the coming transition will play out in the same manner this time.

Me: And in what manner is that?

God: Let me explain it to you using a formula that psychiatrists like to use as it relates to the stages of dying.

Me: So you see this looming market meltdown as a form of dying?

God: Yes, but not in the sense that you understand. There is no death. There are beginnings and ends but the end is not a death. It is a time of transition to something new - a new paradigm. Death is the end of the old as well as the beginning of the new.

Me: So the death of the markets is merely a transition?

God: Yes, and people will likely react in predictable ways during this process.

Me: I took a Psychology class in college so I think I know what you are talking about. It's the "Stages of Dying" right? The five stages of grief that Elizabeth Kubler-Ross observed human beings go through in the process of someone or something dying.

God: Yes and those stages are: *Denial, Anger, Bargaining, Depression and Acceptance*. For the most part, that is the way humans are programmed to deal with grieving and death.

Me: So the death of our current financial system will go through these five stages just like humans do?

God: Yes. Your current global financial system is a uniquely human structure that was developed by humans, run by humans and will ultimately be destroyed by humans. During the process of destroying itself, those involved and operating within this system will act in a predictable manner.

Me: Ok. Walk me through how these five stages will develop when the crash hits.

God: In the beginning there will be the Denial Stage. The stock markets will crash, banks will shut their doors, liquidity will dry up and the market participants will believe they are experiencing something like the crash in 2008. The mainstream media will trot out the market cheerleaders to tell the world that it is just another hiccup pronouncing that “the bottom is in” and everyone should return to the markets, contribute to their 401k’s and pay their taxes as if nothing is wrong with the system.

Me: That sure sounds like a Denial Phase, but it’s much worse than the crash in 2008 right? I mean, back then it was the crashing of the stock market and the housing markets. The next crash will involve the crashing of sovereign debt markets and the derivative markets which is 100 times bigger than what we experienced before.

God: Yes, and that will very soon come to light in the minds of the people. That’s when the people will move into the Anger Stage. Anger at the bankers for getting them into this situation once again; anger at Government officials for driving up the debt so high and allowing the bankers to control them; anger at the rich and powerful who ran and controlled our system, ultimately allowing it to fail. There will be a lot of anger and a lot of blame to go around.

Me: But how will the system get fixed with all this anger towards those who were running the system in the first place?

God: It won’t be fixed. The anger will assure the next stage of the transition - the Bargaining Stage. The anger will die down with the removal and arrests of those who illegally gamed the system but then the people will be stuck without a system to continue forward. The controllers that ran the last system will not be allowed to participate in restructuring the new system even though they will try to convince the people that their solutions are better than nothing. There will be many ideas brought forth regarding how to amend, rejigger and more or less fix the old system but they will fall

on deaf ears. The anger will be too great to repair the past system as it benefitted the few as opposed to the many.

Me: So the bargaining to restart the old system will ultimately fail due to the anger of the majority of the population?

God: Yes. It would take too many “Deciders” at a time when nobody trusts those who are making the decisions.

Me: So what will happen going forward?

God: Unknown.

Me: That’s depressing.

God: Hence stage 4: the Depression Stage. In this stage there will be a void of leadership as all the old leaders will have been exposed and removed from their positions of power. The crooked bankers, government officials, judges and media personalities will all be exposed. Military and law enforcement will be of little help as they will hunker down to protect their own families and communities.

Me: Are there any solutions to this mess? It sounds like it has the potential to turn into a Mad Max type of world: a lawless wasteland with little hope for humanity to move forward?

God: That is possible but it’s not necessarily going to go down that way. It all depends on your decisions at this very critical stage.

Me: You mean stage five: the Acceptance Stage. That’s when we are forced to make decisions as there is no way to go back to what we had before and there is nothing in place to work with. At that point, we will just have to deal with building our new systems or everything will fall into chaos.

God: Yes, the Acceptance Phase is when you will finally have to make the full transition into accepting that the past is gone and will not return.

Me: That is when we will feel totally and completely defeated, when we will have lost everything.

God: Don't be so down about it! This is the best time for your creativity and ingenuity to shine through. Starting from scratch can be exhilarating and when you finally accept that the past will not return you can move forward. You have gone through all five stages of grieving and you now have cleared the runway to takeoff once again - to plot a new course for humanity!

Me: I guess so but where can we go from there? Don't we have any clear choices of where to go or what to do after we accept that the past cannot return?

God: Yes. There will be choices and options that will be presented that do not involve going back to the old ways.

Me: Do you mean returning to a gold/silver coin standard? No more fiat money?

God: That is one of the choices.

Me: But won't that also take too many deciders?

God: No, new systems will naturally evolve with time. Historically, a gold and silver standard has taken hold, as it requires the fewest deciders but that will be only one of the options. There are also crypto-currencies available although they will be difficult for many people to understand and participate in at the beginning. Functionally, some people and small communities may even return to a barter system on a local level.

Me: So we will have options but which one will we choose to implement going forward?

God: Whichever you'd like – or all of them! It's totally and completely up to you as it is your future.

Me: What if we can't agree on what to use going forward?

God: You won't all agree. At this point you will all have free will to choose what you want to participate in.

Me: But if people don't agree on what to use doesn't that leave the door open for a dictatorial form of government that forces people to use their "fiat" money again? Wouldn't that throw free will right out the window?

God: It is possible but not necessarily what is going to happen. Especially considering the experience humans had with the last go-round of believing in your controllers of un-backed fiat money. Expect to see many forms of currency take hold, depending on the location and resources of the individual communities.

Me: It sounds so different.

God: It will be. And isn't that the most wonderful part of life going forward?

Me: Yes, it is. Change is needed and change is what is coming.

God: Would you expect anything else from your experience here on Earth?

Me: No, I guess it is what I planned to experience.

God: Yes, exactly what you planned.

END

Chapter III

Market Rigging

Me: I'd like to talk about market rigging.

God: Ok. What about it?

Me: It seems so pervasive these days. Will there ever be a time when there are truly "free markets."

God: That is up to you but there has never been a time when there were truly "free markets."

Me: What do you mean?

God: There will always be people looking to game any set of rules. Looking for ways to get what they want without giving up something that has value to them. The moment a law is made there are those who try to get around the law. It is part of the system. Nothing is perfect so there is always room to improve.

Me: I understand that but market rigging today seems much different than market rigging in the past.

God: It does to you because you had not known about it before but it has always been present.

Me: But the introduction of computers and computer trading programs must have tipped the scales onto the side of those wanting to execute market manipulation.

God: Yes. That power is now in the hands of a few, and it is more than just rigging prices to make money. There is market manipulation to control supplies, to control demand, to control political agendas, to control currencies and to control where power is centralized. There are as many reasons to rig and control markets as there are stars in the sky.

Me: But how do they get away with it so easily?

God: They control the exchanges, the regulators, the politicians and the legal system.

Me: That seems like a very large control infrastructure. How did they get so many people to buy into this control apparatus?

God: It doesn't take many people – just the right people in the right places.

Me: I suppose. But wouldn't there be whistleblowers that would stop all this manipulation?

God: There have been many whistleblowers but they have been silenced or forgotten about by the vast majority of the population who don't understand the significance of pervasive market manipulation. For there to

be any change there must be the understanding of why market manipulation is so harmful to the society as a whole.

Me: What do you mean?

God: Market manipulation is a required part of the system you have been living under for the past 100 years. It is required on many levels such that the true free market forces do not manifest. If they did begin to manifest they would engulf and destroy the current system. \$1,000/oz silver, \$10,000/oz gold, \$5/barrel oil would all have massive destabilizing effects on your current system.

Me: Wait a minute. I get that the control of precious metals would destabilize the un-backed fiat currency markets but \$5/barrel oil? How could that ever happen and why would that have an adverse effect on our system? Wouldn't it be a good thing?

God: It would seem so to most in the beginning but your system has been built on what is called the "petro-dollar" since the 1950's when the United States began forcing the world to buy oil in US Dollars only. By doing this they created artificial demand for dollars throughout the world and thus they were able to create more and more dollars without a significant weakening in their value.

Me: So that's how they have contained inflation even though they create massive amounts of new money.

God: Yes but that is only one of the ways they control and contain inflation. They also lie about the inflation rate by altering the metrics used to measure inflation.

Me: Talk about an obvious way to contain inflation...just lie about it!

God: Yes, the petro-dollar operation and inflation rate lies have supported the un-backed US Dollar for a very long time.

Me: But that is reversing now as many countries are deciding to purchase oil in other currencies, which will weaken the US Dollar. Won't that be a bad thing for the current system?

God: Yes. That is one of the reasons why market manipulation is so prevalent today. The controllers are desperately trying to keep the system together in any way possible.

Me: Let's get back to what you said about \$5/barrel oil. How is that possible with a weakening US Dollar? Won't inflation drive the price of oil higher with a weakening dollar?

God: It is more than just the value of currencies that raises and lowers prices. There are also the true supply and demand fundamentals of the underlying commodity.

Me: So would it be a supply or demand issue that drives the price of oil to \$5/barrel in a free market?

God: It will likely be both.

Me: How so?

God: There are vast oil reserves that have been hidden from the world in the United States. For example, in Gull Island, Alaska the largest oil field ever found was discovered in the 1960's but capped and hidden...and there are many more. So vast are the oil deposits in the United States that the announcement of them has the potential to drive the price of oil down substantially. They are so large that the United States could live off their domestic oil reserves for centuries even if the current oil infrastructure stays in place.

Me: Amazing! Wait. What do you mean: "if the current oil infrastructure stays in place?" How could it ever be displaced?

God: That's the other part of the equation. The burning of "fossil fuels" for energy is not the most efficient method of creating energy. It is probably

the worst of all choices but the controllers have forced it upon the people in order to control them and maintain the status quo.

Me: How so?

God: Imagine if a free energy device was developed and presented to humanity. A device that you could put next to your house or in your car and it would create energy for free – forever.

Me: That would be amazing but there is no such thing.

God: There are many such things. Nicola Tesla tried to present this technology to the world in the 1930's but he was silenced, and so were many people since. From new electrics to magnetic engines to dark matter energies to even using water to power your car: those who wish to keep you under their control have suppressed all these technologies.

Me: Why? Why is it so important for them to suppress these technologies from us?

God: Two reasons: first, they wouldn't make any money off you, which would undermine their control and second, very large parts of commerce in the advanced economies of the world today are directly centered on the oil industry. From automobiles to power plants to fertilizers to plastic containers...all are demand sources for oil. If you take those away a large portion of the population would instantly be out of work. Without work for the masses they may look at their controllers, with all their wealth and power, and say "I WANT MY SHARE!"

Me: That seems like a recipe for chaos.

God: Yes, and that's exactly what the controllers keep telling those that try to fix this mess.

Me: Oh. You mean like when the US Treasury Secretary, Hank Paulson told Congressional leaders in the 2008 bailout discussions, "If you don't bail out the banks then everyone will lose everything in a matter of hours!"

God: Yes.

Me: So how do we get out from under this system and these controllers?

God: Like I've said before: "Just say No!"

Me: Yes. Just say no to any more bailouts no matter what the consequences.

God: Yes. It's the only way. It won't be easy but it's the only way.

Me: I guess it's time to bite the bullet.

God: Well said Bix. Well said.

End

Chapter IV

The Derivative Problem

Me: What are derivatives all about and why are they so dangerous for the survival of our system these days?

God: Derivatives are side bets that people who deal in finance use to both hedge risk and gamble for potential profit.

Me: What do you mean side bets?

God: A side bet means it is not a legitimate commercial transaction but rather it is a contractual agreement based off an underlying financial

asset's performance. It is a bet between two or more parties on a future event or condition.

Me: Give me an example of a derivative.

God: Ok, two people make a bet on what the price of gold will be six months from now. One person thinks it will rise over 10% and the other does not. They bet a certain amount of money both promising to pay the winner in six month's time.

Me: That just sounds like gambling.

God: It can be if neither party is doing it for a specific purpose other than to make money.

Me: What other purpose is a derivative contract used for?

God: Hedging assets and here's an example. One or both of the parties may own some gold and want to protect the value of the gold by entering into a type of insurance contract that protects it from any loss in value. That is called a hedge and is used in all types of financial transactions from metal markets to interest rates to oil prices. There are many legitimate reasons to use derivatives to protect assets against losses in value.

Me: Well, who takes the other side of these hedges, the other side of the bet?

God: Someone who is trying to hedge the opposite change in value of their own asset or an insurance company or even a speculator.

Me: A speculator is more like a gambler right?

God: Yes. A speculator is trying to make money in a market for the sake of making money and not for a particular hedging reason.

Me: Are speculators bad?

God: No, legitimate hedgers and speculators add liquidity to a market so that there is always a sufficient amount of buyers and sellers for the market to function freely.

Me: That sounds very reasonable; so why are people saying that derivatives are toxic and can take down our system if they run into a problem?

God: The problem lies in the amount of liquidity there is in the market, the source of the liquidity and the ability for the counterparty of each transaction to live up to their obligations.

Me: What's the problem with the amount of liquidity? I know that gold and silver derivative trading has massive liquidity. Much more than is ever mined or traded every year. There are over 100 times the gold and silver derivatives that trade compared to the amount of physical metal available. That should be plenty of liquidity.

God: That is one of the big problems...too much liquidity concentrated in too few traders. With high frequency trading in gold and silver derivatives, the large bullion banks have taken control of the true price discovery with their computer programs.

Me: Aren't they just hedging for gold and silver miners and industrial inventories?

God: No, not in the quantity that they trade everyday. They can drive the price up or down by selling or buying large amounts of gold and silver derivatives. There is no legitimate reason for anyone to be trading in such large amounts unless their intent is to manipulate the prices artificially. They are acting as pure speculators with immunity from the exchanges and regulators because they claim they are controlling the markets for the good of the system.

Me: Of course they skim their profit off the top for their "good deeds," don't they?

God: Yes, more than their share.

Me: So tell me how the derivative game can destroy the system.

God: The size of the bets made since the mid-1990's dwarfs the amount of real financial assets that underlie these derivative contracts.

Me: Trillions of dollars worth of derivative contracts are written, right?

God: More – hundreds of trillions of dollars worth! Some say quadrillions but nobody knows for sure.

Me: That sounds very reckless. I've heard the banks say that most of the derivatives that they hold are offsetting so they are not really at risk for the large amounts stated.

God: That is true but they are fooling themselves if they believe that all of their offsetting derivatives will cover what they are trying to hedge.

Me: How so?

God: It has to do with the way most derivatives are structured and how they are settled. When a seller of a derivative, like an insurance company, sells a derivative product it executes complicated risk models that determine the odds that they will have to pay out on the derivative and charge an upfront fee as determined by those models. Like all insurance products it is a great fee generator in the beginning and if the event never happens it is a huge windfall.

Me: And what if the event does happen and they have to pay out on their derivative?

God: Well, if their models are correct and their portfolio was structured appropriately they will be able to afford to pay the derivative holder and continue writing more derivative contracts.

Me: And what happens if something goes wrong? What if something happens that the derivative seller didn't expect, or that had a very low probability of happening but it happens anyway?

God: That's where the trouble can start. You see, because all these banks hold hedging derivatives to hedge other derivative contracts they had entered into, the system becomes very susceptible to counter-party risk.

Me: What is counter-party risk?

God: Counter-party risk is the likelihood that an entity that sells a derivative to be paid in the future does not live up to its side of the bargain. This can happen if a company has financial problems that begin to escalate or because some of the parties that participate in the derivative markets were never financially sound in the first place. Since there are very few regulations on derivatives almost anyone can buy or sell a derivative contract with anyone willing to take the other side of the bet.

Me: That sounds very shady.

God: It is but it gets worse. Because the riskier derivatives are less likely to be written by a sound institution they usually end up being offered by weaker companies looking to make the higher premiums on risky derivatives. Then these derivative positions are bought and sold amongst the participants in the derivative market, which makes the problem even worse as it weakens the overall derivative complex.

Me: That gets a little confusing.

God: Here's an example: say a bank wants to give a loan to a large, well established company but they have already reached their previously established maximum exposure of outstanding loans to the company. In order to get around these limits, the bank buys a Credit Default Swap (CDS) contract that will payout a portion of or all of the loan balance if the customer defaults on their payments. When assessing the total money at risk to this company, the banks and regulators would deduct the CDS insurance policy from the overall loans outstanding. This gives the illusion that the bank is below its maximum lending capacity and they are able to write even more loans to the same company.

Me: That makes sense, I think.

God: Now let's say the company falls on hard times and the cost to buy a CDS for this company increases because the risk increases. Other lenders and speculators also start buying CDS contracts on this company thinking they can cover their losses and/or even make some money if the company

defaults. More and more CDS's are written on the same credit. As the credit of the company weakens the companies that wrote the original CDS's start to get nervous about their positions and buy CDS's from someone else to cover their own CDS's that they had written.

Me: So that is why the derivative market is so big. Everybody is trying to balance their portfolio by hedging their derivatives with other derivatives!

God: Yes.

Me: What a frickin' mess!

God: Yes, a Quadrillion dollar mess.

Me: So all it will take is a few of the weaker counter-parties that are on the hook for derivative contracts to go bankrupt to set the dominoes falling.

God: Or just one big counter-party as happened in 2008 when the US Government had to bailout AIG. They were on the hook for a massive amount of derivative contracts that were necessary for the banks to get paid-out for their hedged losses. If AIG did not get bailed out, the entire Global Monetary System would have shut down in a matter of days.

Me: Why in the world was this market allowed to become so big and dangerous?

God: Well, that gets back to your Road to Roota Theory – that the banks were given enough rope to hang themselves and destroy the system.

Me: But the banks must know that the derivative markets are so big that they threaten to destroy their entire system. Why would they keep letting it grow and grow?

God: That's easy - they are greedy. They are always out to make a buck no matter what the consequences especially if there is not regulation in the markets such as in the derivative markets.

Me: But surely the government, Federal Reserve and regulators are trying to reign in the derivative markets after what happened in 2008. Surely they have learned their lesson.

God: HA! Not a chance. The derivative market has only grown since 2008 and all the talk of regulation and formal exchanges is just that – talk. There are no plans to bring the derivative market back from the brink. As a matter of fact, the plan is just the opposite: let the derivative bubble implode and destroy the system.

Me: What a crazy and mixed up world we live in.

God: The banks have created a monster that will ultimately destroy the entire Global Monetary System once and for all.

Me: Insane - but then we can start fresh, right?

God: Yes, then you can start fresh.

Me: Thanks for helping me understand what everyone is talking about when they call derivatives “Weapons of Mass Financial Destruction!”

God: You are welcome.

END

Chapter V

Banking Basics

Me: Are banks bad?

God: Some are bad.

Me: Is the concept of banking bad?

God: No, why would it be?

Me: It just feels so wrong. Creating money from thin air and then lending it out and collecting interest on the money they just created. It's making money for nothing and should be illegal!

God: Lending anything out to get something in return is simply people exercising their free will. Both parties have decided on what they want to do and both should live with the consequences of their own decisions.

Me: But in a fractional reserve system the banks are lending something they don't own. They didn't work for that money and yet they are charging people to use the money they create from thin air.

God: True – there are faults in the current banking structure that allows the creation of money from thin air through fractional reserve mechanics. Most banks are leveraged 10 to 1 meaning they lend out 10 times the amount of capital they hold.

Me: See! That's just wrong. Banks are allowed to lend something they never had in the first place. Banks that lend what they don't own are bad.

God: If you believe that then you should not let them do it.

Me: And I don't want them to do it.

God: It is your choice but banking does not have to function as a fractional reserve system. Banks can lend money that they do actually own and charge interest on that money.

Me: But wouldn't interest rates go up a lot if banks are not allowed to use 10x leverage on creating new loans?

God: Yes, they would go up to justify the risk of loss for the bank. If they wanted to make a similar profit, interest rates would have to go up at least 10 times as well without the leverage.

Me: But I don't want interest rates to rise so much. If interest rates rose too high, it would destroy many asset prices, especially in the real estate market.

God: Ha! Are you arguing for the continuation of fractional reserve banking because it benefits YOU to have low interest rates?!

Me: Um. I guess I am. Crap. I want the banks to go away but at the same time I still want the benefits that they offer. I'm a hypocrite!

God: Don't be so hard on yourself. The coming transition will make a lot of things change. Some will feel very liberating and some will be so different that they will seem draconian.

Me: Does it have to be that way?

God: No, but humans should have thought about that in the 1970s when they went off the gold standard. Cheap money for ALL!! You wanted the best of both worlds but knew that at some point you would have to face reality. Now is the time that reality hits.

Me: I guess it will. Are you suggesting that we go back to a gold standard so we don't have the same problems we have now?

God: I am suggesting you DO WHAT YOU WANT! This is your system and now that it is failing you know some of the problems and some of the potential solutions. Take responsibility for your own monetary system and stop relying on others to tell you what's best.

Me: I guess you are right but which is the best form of new money after the old money fails?

God: All of them. Decide for yourselves and see where it takes you.

Me: Really?

God: Or don't pick any new monetary system at all and see what develops naturally.

Me: As far as I can tell people have always gone back to using gold and silver coins as money when the old system fails. This truth goes back thousands of years so I don't see why it wouldn't apply today.

God: Sounds like that's where you want to go.

Me: And I doubt that the people of the world will allow fractional reserve banking after the banks collapse and they lose their life savings.

God: Probably not.

Me: I also assume that the privately owned Federal Reserve System will not be allowed to run our monetary system if they get some of the blame for the collapse.

God: You are correct. That power and control belongs with the people and in the case of the United States of America that power should reside at the US Treasury.

Me: But they are just as corrupt as the banks!

God: Then change what you deem as unacceptable behavior from your government employees. Make the banking system TRANSPARENT with no more secret dealings and secret agendas. Go back to what your Founding Fathers had intended – a government by and for the people.

Me: Interesting. So bank lending can be constructed in a non-fractional way and the oversight can be from the US Treasury if everything is transparent?

God: Yes, but after the crash the current banks that are leveraged so highly will no longer be solvent. They will have imploded and will never reopen so there may be a short time that all banking functions are run by the US Treasury.

Me: Interesting. How will they get the banking services to the people without any infrastructure? The US Treasury doesn't have bank branches located all over the country like we have with private banking branches today. How would they do it?

God: They can use the government buildings located throughout the United States which already have high security and attendants sitting behind bullet-proof glass.

Me: What are you talking about?

God: Just go to any government owned building and you will find customer service employees just waiting to add a banking function to their list of duties! From county clerks to court houses to municipalities to...

Me: Wait...the US POST OFFICE!!! Almost every town in the United States has a post office and most of these buildings are in the process of being sold off because the US Post Office is losing so much money. That would be a perfect fit when the banks shut down. The US Treasury could set up new banking braches at the US Post Office buildings.

God: Yes, of course. That would be an excellent solution to assist in the transition.

Me: I think so too. It would also keep Post Office employees employed, as I am pretty sure that there will be a lot of unemployment after the crash hits.

God: Yes, there will be but there will also be ample opportunities for work in helping to build the new system.

Me: And with the implosion of the old system there will be no need for people to work two jobs just to pay off all their debt that has piled up over the years! The debt will be extinguished when the banks fail right?

God: Yes, even if people wanted to pay off their debt they will no longer have any money in their savings or checking or brokerage accounts to make those payments. Oh, you'd better keep an eye on the bankers as they tend to try and collect on their past due loans.

Me: Loans with money they didn't even have to lend in the first place?! Bahaha! Not a chance.

God: But they will surely try.

Me: Bring it on!

God: That's the spirit Bix.

Me: But seriously, do you think they will be able to strong-arm us into paying back what we owed to them before the crash?

God: Not if the people are awake and aware, which they will be if they lose their entire life savings in a failed bank. The bankers will have to concede that the debts are un-payable.

Me: Good. I'd hate to see lynch mobs form outside of bankers homes because they are trying to foreclose on their customers.

God: That will be entirely up to you.

Me: And THEM!

God: Yes Bix, and them.

END

Chapter VI

Reallocation of Money

Me: Hi God.

God: Hi Bix, What's up?

Me: I want to talk about the redistribution of money after the crash.

God: Ok. What would you like to do?

Me: What do you mean?

God: You are the decider. This is your reality.

Me: I know but it's a pretty big deal figuring out who gets what going forward. Can't you give me some tips? Surely this has happened before in the span of eternity. What have other societies done?

God: There are as many possibilities as there are grains of sand on earth. If you can imagine it, you can create it.

Me: Ok. Let me run a few by you and let me know your thoughts.

God: Sure, fire away.

Me: How about NESARA? The National Economic Stability and Recovery Act that supposedly was signed into law in the late 1990's but was sealed and never implemented.

God: That's a fine attempt at fairly rejiggering the current allocation of wealth. The way NESARA works is that it attempts to adjust where everyone is now and extract some of the "dirty money" that was made over the years. For example, it will recalculate your current debts subtracting out all the interest you've paid to date from your principle. If you have been paying off the debt for a long time then it will be likely that you will have a zero balance on that debt after subtracting the interest. It is an attempt at being as fair as possible while also maintaining the status quo.

Me: Is that a good thing or a bad thing?

God: That's up to you to decide but you must remember, whatever you decide to do you will have to get the buy-in from the majority of the population and they will not be happy during this process

Me: That's true but there is no system that makes EVERYBODY happy.

God: That's why it's such a difficult problem to solve.

Me: What about Greenspan's idea of using the Social Security balances to allocate the new money? That seems like it would be better than trying to rejigger the current system.

God: You are right that it would be fairer to those who have played by the rules all these years. The elderly would likely benefit the most from this allocation system as they have been paying into the Social Security system for the longest amount of time. They also have a much louder voice in all forms of Government.

Me: And they deserve to get more. They had to live through this painful system for the longest amount of time. They have also been treated unfairly because those who already get Social Security payments only get increases with changes in the CPI which is a completely rigged number. It is the elderly that get hurt the most when "The Powers That Be" rig the inflation numbers lower trying to fool the world.

God: Yes, they have had hardships and they do deserve to live out their days comfortably. To achieve this kind of reallocation it will also take most everyone to agree and many of the people that are not in the Social Security System, for whatever reason, will be against it. But remember, any decision to start a new system or restart a version of the old system will take "deciders".

Me: Of course, but what are the other options?

God: You can always do nothing.

Me: Do nothing? What do you mean?

God: I mean do nothing. Let the system fail and then start fresh.

Me: I know but how can we "start fresh" without any money?

God: That is your choice and at some point humans will evolve to a point where there is no need for money.

Me: I agree but we clearly have not evolved to that point yet. What can we do now?

God: How about returning to the ideas of the Founding Fathers of the United States. Surely the original founding documents of your nation can give you some guidance.

Me: I believe so but can returning to a gold and silver coin standard really move us forward in our lives?

God: I would say, 100% YES! This current system is so complicated that it's hard to believe you have moved forward at all. Using debt as money...that's got to be the very worst idea ever and yet you are afraid to leave it.

Me: I'm not that afraid but others are I'm sure.

God: Of course they are. They are terrified because that's all they know. The system is set up to create ever-increasing amounts of debt just to pay off the interest on the old debt. It is a gigantic house of cards that is about to come crashing down. Why not return to a simpler way of life and focus your attentions on other things rather than wondering how to make your next interest payment?

Me: That makes sense but it's just so different and there will be people who will NOT want to change.

God: There always are. That's why it is such a difficult transition and the best answer is usually the one with the least amount of "deciders".

Me: So if we let everything fail and start fresh with a new form of money based on our founding documents how will that work? Is there enough gold and silver to start again with a precious metal standard?

God: There have been plans to make this transition for over 100 years. There are hidden stashes of gold all around the world with the largest deposits in the United States. There will be plenty of gold to use as money when the time comes.

Me: And what about silver? Do we have enough physical silver to restart some form of Silver Standard and issue silver coins?

God: Silver coins could also be used but there may be more valuable uses for silver in the new technologies that will be introduced.

Me: So will the silver price ever live up to it's potential value in a market that is not freely traded without manipulation?

God: Yes, and there is a lot of catching up to do in the case of the silver price since it has been rigged for way too long! There is also the fact that most of the gold ever taken out of the ground is still in forms that can be bought and sold. All the silver, on the other hand, has been utilized in very small amounts in all the electronics produced over the past 60 years. Most of this silver will never be recovered so there is a huge physical silver shortage that is not reflect in the price.

Me: I'm looking forward to a TRUE Fair Market Value of silver.

God: I know you are, and it will come in due time.

Me: Let's talk about how gold and silver coins will return for use as currency. Who gets what as there still has to be an allocation system for all the gold and silver coins?

God: Why not give everyone the same amount?

Me: You mean even babies get as much as rich and successful business people?

God: It's one way to do it in which the "fairness" issue is hard to dispute. If there are 330 million US citizens and there are 3.3 billion ounces of gold to distribute, then every one gets (10) one ounce Gold Eagles.

Me: That seems too simple since there are other very good uses for the money in society like overhauling the education system, cleaning up the environment and helping feed the world. There are so many important and necessary causes this new money can be put towards.

God: I agree but then you will once again go down the Road of multiple “Deciders” which is always difficult.

Me: That’s true. Even for such a positive idea, when it comes to the allocation of the new money there will be those who don’t like it.

God: See, this is a complicated transition.

Me: Yes, I see that. What about the secret gold and other treasures I keep hearing about that is hidden in Asia? Supposedly, they have been hidden away from humanity to be released to each country after the crash. Is this true?

God: Yes, it is.

Me: How will all that wealth be allocated to the people?

God: Again, you are the decider. What you do think is fair?

Me: Well since that wealth has been hidden away for so long and it was supposedly designated for all of humanity, I guess it should be spent by the people on things that will help the world in general. Things like cleaning up the planet, feeding the poor and building a sound and sustainable future.

God: Sounds like a good idea...but it will still require deciders.

Me: Which adds even more complication to solving the equation of reallocation of wealth to the people after the crash.

God: Don’t you just love complication Bix?

Me: I guess I do since I seem to be creating quite a bit of it in all this mess.

God: You do like your challenges.

Me: Or I’m just a sucker for punishment!

God: Same difference.

END

Chapter VII

If You Don't Hold It...

Me: A lot of people are discouraged about the gold and silver mining company stocks that they have been losing money on.

God: Yes, they are upset.

Me: They bought them because they figured these companies were undervalued based on the amount of reserves in the ground and the suppressed value of the precious metals.

God: Yes.

Me: Did they make a mistake in buying these mining stocks?

God: Not a mistake. It is part of their life experiences that they have chosen for themselves.

Me: What lesson? How to lose your life savings because someone else controls the prices?

God: Sure. Why not? They did not know about the price suppression before they bought their shares and over time they came to understand more about what was going on in the financial markets. They are awakening. If the prices had risen the way they wanted them to, they would not have spent the time and effort in figuring out what was really going on. They would have just rested on their laurels and learned very little in the process.

Me: I guess it is part of the learning process but the manipulation is still wrong.

God: It sure is.

Me: It was a little different for me when I was buying mining shares in the early 2000s. I did understand that the prices were rigged but I thought that if I fought hard enough and complained enough to the regulators, the price manipulation would end and the true value of these companies would skyrocket along with my shares going through the roof.

God: How'd that work out for you?

Me: It didn't. I found out that it was the Government and regulators that were the ones supporting and running cover for the manipulators! I was complaining to the very people involved in the manipulation, so how could I expect any change?

God: What did you do then?

Me: I kind of gave up on complaining to them. Others have taken up the cause but it's like yelling into the wind...they never get very far.

God: I guess you had learned quite a bit to give up on such a huge potential reward in undervalued mining stocks.

Me: Yes, but there was another reason I got out of mining shares. They were way TOO undervalued.

God: Explain how you came to that conclusion.

Me: It's simple. I knew that the metal and share prices were rigged so low that at some point they had to explode upwards. When that happens the true price of both metals will be realized but at the same time the fiat monetary system would likely implode. After all, the suppression of gold and silver prices is the only reason that the un-backed fiat system had lasted so long.

God: Go on.

Me: If the prices of gold and silver skyrocketed, then the value of the mining companies would skyrocket exponentially as the true value of these companies' holdings are not currently being factored into their market cap. The scenario I would find myself in is a broken monetary system with wealth once again concentrated into the hands of the few holders of precious metals and mining stocks while the rest of the world is on their knees. The rest of the world will have lost everything in the crash of the old system. At that point, there would be a push by the majority of citizens to nationalize mines and confiscate large stores of gold and silver. It was a lose-lose scenario so I decided to go all into physical and get out of the mining stocks.

God: So you didn't get out of owning mining stocks because you didn't think they would be valuable, you got out because you thought they would be TOO VALUABLE!

Me: Exactly.

God: Was there any other reason you got out?

Me: Yes! I found out that there were no clear ownership rights for ANY of the shares that were being traded.

God: You mean the problem with the DTCC that we discussed in our previous conversation from Book I?

Me: Yes, the Depository Trust and Clearing Corporation is supposed to be finalizing and holding in trust each and every stock trade but they are not. There are hundreds of millions of trades that never get fully settled everyday. Meaning that when you buy a share of stock from your brokerage house, you have no idea if you ever get it transferred into your name nor do you have any idea how many others are in the same predicament. Given that the total amount of shares ever issued by public companies all seem to trade hands every few days in the High Frequency Trading world we live in, nobody knows who owns what.

God: But the system keeps on moving forward without many hitches.

Me: It does – until it doesn't.

God: Explain what you mean by that.

Me: One day the music will stop and people will try to cash-in or certificate their holdings only to find that there are multiple holders of the same shares that are trying to do the exact same thing.

God: Basically, when the music stops everyone will be trying to sit in the same chair.

Me: Exactly. And the same goes for shares in Exchange Traded Funds that hold physical metal as well as metal certificates and pooled metal accounts. All are fractionally held with only a small percentage of physical metal kept in the possession of the trustee or custodian.

God: Of course, that is not true with all metal storage companies. There are some very honest and trustworthy companies running honest precious metal storage businesses.

Me: I agree but even they will be easy targets for any attempts at nationalization or confiscation of stored precious metals when everything falls apart. They also run their businesses within the current fiat system with bills and employees to pay. Your stored metal will always be at risk that the storage company can stay

solvent and, if it gets really bad, the guards of the vaults may even decide to abscond with your gold and silver in an attempt to save their own family and friends from the global monetary meltdown.

God: Yes, it is one of the scenarios that people may choose.

Me: So in the end I have chosen to keep all my metal in my own possession without the need to trust any third party to stay solvent during the global monetary meltdown.

God: You do know that doing something like that has risks as well, right?

Me: Of course. There is risk of theft, personal wealth confiscation, natural disaster losses, taxation on metal transactions and the always problematic outlawing of personal metal transactions for those holding metal in your own possession. There are as many risks as you can imagine but at the end of the day there is security in knowing that I am in charge of my own destiny when it comes to my gold and silver investments.

God: Very well. That is your choice. This is your experience and you are in control of how it will all play out.

Me: Exactly. And I know all too well that if a banker holds something in trust for someone else they treat it as if it was their own asset and will use it to try and make more money.

God: Yes, they call it “hypothecation” and when they do it multiple times with assets already pledged as collateral it is called “re-hypothecation.” Both of these terms came to the forefront with the collapse of ex-US Senator Jon Corzine’s US brokerage firm MF Global.

Me: I don’t care what they call it, and I don’t care if Corzine has connections all over Washington DC. I call it fraud and he belongs in jail!

God: It is fraud and he should have gone to jail but you have not made it so. You have let the abusers of the system continue their practices without so much as a whisper of discontent.

Me: What will it take to get them to stop?

God: It will take the People to stand up and say, “No More!”

Me: And that will happen after the system crashes and everyone loses everything, right?

God: Yes, that is what you have decided.

Me: Good...and Good Riddance to the criminals!

God: Good Riddance.

END

Chapter VIII

Bitcoin to the Masses

Me: God, what's the real deal with Bitcoin? Is it really something that the people will embrace and adopt as a form of money after the crash?

God: If you choose it to be so – then it will be.

Me: It sure is struggling now though. Have you seen the price?

God: Of course I have. It has risen from \$0BTC to over \$200BTC in a short amount of time.

Me: No. I mean it has lost 80% of its value in the past two years!

God: It all depends on your perspective. Bitcoin is not a short-term phenomenon that will pass. It is one of the solutions to the monetary problem that humanity has decided to bring forward at just the right time. There will come a time when Bitcoin is needed to assist in the transition from the old system and into a new one.

Me: But the drop in price has lost fortunes for people and scared them away. Now it has a very bad term being attached to it: “Ponzi Scheme.”

God: Bitcon is not for everyone. It is volatile, it is complicated and it is a very new invention for mankind. It is a technological innovation that has the potential to replace the old way of transacting business and commerce for mankind. Much like email is replacing the postal service and the Internet is replacing newspapers, Bitcoin is a disruptive technology and may, in the near future, replace fiat money.

Me: That seems like a stretch at this point in time.

God: It may seem so but it all depends on what happens to fiat money in the coming chaos.

Me: So ultimately, Bitcoin is NOT a disruptive technology when it comes to money so much as it is an option when the current form of money destroys itself.

God: You could put it that way.

Me: But there are problems with Bitcoin at the moment and they seem very hard to overcome.

God: For example?

Me: Well there’s the fact that it is very volatile which is not good for any form of money.

God: That is true but all forms of new money are volatile in the beginning – before they are adopted by the masses.

Me: I guess so but Bitcoin is very far from being “adopted by the masses.”

God: It may not be as far as you think it is.

Me: How do you figure?

God: There are people working behind the scenes to build out the Bitcoin infrastructure so it is easier to use in a variety of ways and introducing it to a larger community.

Me: Like what?

God: For one, there is a company that is producing a computer chip that will put a mini-Bitcoin mining processor on every electronic device you can imagine. It will run concurrently with your use of the device and you will be mining and earning micro amounts of Bitcoin behind the scenes of your normal devices activities.

Me: Like what kind of device?

God: Any device that can connect to the Internet.

Me: You mean like a cell phone, a tablet, a desktop and laptop computer?

God: Yes, even those new high tech refrigerators that connect to the Internet can be implanted with a Bitcoin mining chip.

Me: No way. How will all this work? Doesn't it take a lot of power to mine Bitcoins?

God: Yes, a Bitcoin mining chip loaded onto any device will consume additional power when operating the device.

Me: Then who would want to have the device installed on their phone if it's going to cost them more money to run it?

God: Everybody! The value of the Bitcoin created in each device can be an offset against the cost of the extra power needed to run the device. Depending on the value of Bitcoin at any given moment, there will come a time when it will be an easy decision based on value.

Me: Ok. What are other advantages of implementing this technology?

God: The value of the Bitcoin generated can also offset the upfront cost of buying the device in the first place. Imagine getting a free iPhone if you agree to have a Bitcoin chip added to your phone. Of course the company that is producing and selling the chip will take some of the Bitcoins you produce and use them to offset the cost of the phone as well as for their own costs and profit.

Me: Interesting business model, but I'm not so sure that Bitcoin will be adopted by enough people for it to be worth as much as the extra cost of the power needed to power devices.

God: But that's the REAL beauty of this concept. Not only will the Bitcoin mining chip be generating Bitcoin on your phone, it will also be setting people up with a Bitcoin wallet where you can see your Bitcoin balance rise as it mines the coins.

Me: Holy Cow! I get it. All those people who get a cheaper phone with the Bitcoin chip on it will automatically get involved with Bitcoin as everyone will have an online wallet and be producing coins for themselves! Just having the ability to generate and spend Bitcoin would naturally acclimate people to the Bitcoin concept. Think about how many people have cell phones these days...BILLIONS!

God: Yes. It will be a significant breakthrough for the mass adoption of Bitcoin by people all around the world.

Me: But is this technology possible? Can it be that easy and that seamlessly integrated into the devices?

God: Not only is the technology possible, but it is already in the late development stages with people currently testing it on their cell phones.

Me: This is a huge breakthrough in technology but how does a company that implements this technology make money?

God: There are many ways to make money off this type of technology from sharing agreements on the Bitcoins that are mined to commissions from new sales of the mobile devices that have the mining chip implanted.

Me: Hang on. What if it works too well?

God: What do you mean?

Me: Think about it. Putting a Bitcoin mining chip on every Internet connected device in the world, all feeding into a centralized company that controls it, seems like something that the Bitcoin community is fighting against. Won't this put too much power into the hands of the people that run and control this technology? I have heard that some of the very people that have been involved in rigging our current system are involved with these new Bitcoin start-ups. Real bad "Bad Guys" like Larry Summers and Blythe Masters. These people are professional market riggers and use their power and influence to destroy free markets, not promote them.

God: Like I said before, all monetary systems have those that wish to exploit and distort them. It is human nature for some people to want to game the system. It's part of what forces change as systems get too corrupted.

Me: So corruption will always be present in any financial or monetary system we create?

God: It always has been and, likely, always will be.

Me: That's sucks.

God: Don't worry too much about it. Like all new systems that displace the old corrupt systems, it begins with a more fair and free-market starting point. At the moment, Bitcoin is very difficult to manipulate or corrupt as the majority of coins are disbursed and not concentrated. If the new micro-mining chip technology is placed into all the mobile devices in the world, the wide distribution of these new coins will only grow.

Me: And from what I understand the only way to corrupt the Bitcoin protocol is to get over 50% control of all the coins ever mined.

God: Yes and that would be very difficult to do since those who hold coins now know that it would corrupt the system and destroy the value of their own coins. They would basically be hurting themselves by attempting to get 50% control of all the Bitcoins available.

Me: But there are people in the world that will do ANYTHING to stop the adoption of anything other than their un-backed fiat money.

God: True but gaining control of 50% of the coins is still not likely at this stage. Not impossible but not likely especially with the coming collapse of the current monetary system.

Me: Interesting. It seems like Bitcoin is gradually becoming a good solution to the problem we have been dealing with for a long, long time – the problem of what to use as money.

God: Yes, but don't forget that Bitcoin is only one potential solution. There are those who have already decided that they will participate in the Bitcoin community and there are those who want to use only gold and silver or even forms of barter to transact business after the crash of the current system.

Me: There are even those who want to issue a new un-backed fiat money like we had before!

God: Yes, there are as many possibilities as man can think up.

Me: Which is best?

God: None are better or worse: all have their own good qualities as well as faults. It will be up to the people in each community to decide what they want to use as money.

Me: At least everyone will have learned a lesson by then.

God: Most likely they will have learned a very valuable lesson after the crash.

Me: Hopefully, the transition won't be too painful.

God: I'm sure you will make it through this.

Me: It's what I have chosen right?

God: Yes, it is what you have chosen.

END

Chapter IX

What If We Knew?

Me: I just had the strangest thought pop into my head.

God: Those are usually the best ones! What was it?

Me: What if everybody KNEW that the crash was going to happen?

God: Interesting thought. Walk me through it.

Me: Well all the financial collapses in the past were a total and complete surprise to people.

God: Not everyone but most. There have always been people who either saw it coming or were orchestrating the crash from behind the scenes.

Me: I know that but it's been only a handful of people that were "in the know."

God: True.

Me: Now those people are the ones propping the system up because they are afraid of the system falling apart completely. They are either trying to prolong their power or build the asset bubbles up so high to make the crash worse than ever before.

God: That is true for the most part.

Me: But times are different now.

God: If I had a nickel for every time I heard that!

Me: No. I mean the ability of the masses to understand that there is a crash coming is much greater today than ever before. The internet has made information much more available to everyone and the spreading of this information, especially about the upcoming market crash, is being spread farther and wider than ever before.

God: What's your point?

Me: Well if everyone knows about the impending market crash and tried to prepare for it beforehand, then the crash wouldn't be so bad would it?

God: In a free market, it is that type of behavior that causes market crashes in the first place. Markets crash when everyone tries to get out at the same time.

Me: In a free market, yes. But this is not a free market! The "Powers That Be" are rigging and propping up the markets and are the only reason the markets stay afloat. From the Federal Reserve to the large mutual funds to the big banks, they are all desperately trying to prevent this market from falling but they are running up against the basic fundamentals of market dynamics. People are

already getting out of the markets leaving only the artificial support to hold everything up.

God: To an extent, yes.

Me: So if all this artificial support is 100% necessary now to keep the system going and they are the last ones holding the entire system up – will the collapse be better or worse when it does finally hit?

God: The current controllers of the system are not keeping it afloat to make money or support the lifestyle of the 1% at this point. They are maintaining control because they know the consequences of removing the support. They know that the end of their control will cause more than just civil unrest but a total and complete shut down of the global financial infrastructure. Because the system has become so complex it now requires the orderly functioning of market participants for the delivery of food, water, electricity, services and even information. Everything is dependent upon everything else and they are afraid of what might happen if it all goes away.

Me: That sounds like an “Oh my God!” moment. Will the plans that have been put in place to cushion the blow be effective?

God: Are you speaking about the plans of the “Good Guys?”

Me: I guess so but I never really thought they could pull it off.

God: They are trying to but all large transitions are by their very nature chaotic. It is part of the experience you have chosen.

Me: What can I do to help the transition?

God: You are already doing it. You are putting your thoughts, feelings and intention into the universe with everything you do. When you talk to people, when you spread the knowledge of what is happening. The information is getting out there. More people know about the coming crash than ever in the history of mankind and that knowledge is spreading.

Me: That's for sure. There are so many people expecting a market crash, or at least a large correction these days it's becoming common knowledge.

God: They are also learning that there is artificial support holding the current system together.

Me: I wouldn't say there are many that know that.

God: There are many more than had known it was going on before and the amount of people that are learning about the artificial support and manipulation is growing rapidly.

Me: But can this understanding grow fast enough such that everyone is in the know PRIOR to the crash?

God: Yes, for the most part.

Me: So where does that leave us? If at some point everyone knows the crash is coming, they know that the markets are artificially supported and they know it would be chaotic when the support is removed...we are stuck.

God: You are stuck to change, yes.

Me: I can't see how that can play out. If the system doesn't crash and yet everyone knows what is going on, what happens next.

God: People will be looking for a solution.

Me: But in this scenario the solution will be mandated to the people.

God: It does not have to be that way. People can be given the choice of how they want to deal with the transition.

Me: But everyone will not want the same solution. There is such a discrepancy between the "haves" and the "have-nots" these days and yet some people actually earned their wealth whereas some just gamed the corrupt system.

God: Yes, and it will be a great challenge for mankind to figure out what is fair going forward.

Me: Some want the fiat monetary system to end and the “Bad Guys” to be taken down.

God: Seems reasonable and the desires of all people should be taken into account going forward.

Me: I still don’t see how this can be a smooth transition with all these contrasting wants and needs.

God: It won’t be easy but it can be better than walking into the transition with blinders on.

Me: All I want is to have an honest system going forward. Where people are rewarded for hard work and have the ability to thrive based on their own work ethic and motivations. Is this possible?

God: Sure it is. Anything is possible. This is your experience.

Me: Seems like a very tall order to facilitate a smooth transition away from the current system and onto a new, more honest and fair system.

God: The biggest challenges are usually the best.

Me: That’s why we are here, right?

God: That’s why you are here.

END

Chapter X

Cycles in Life

Me: Let's talk further about the upcoming crash.

God: As you wish.

Me: Why does the Jewish Shemitah hold such significance?

God: It is not the “religiousness” of the Shemitah but rather the desire you have to experience life at its greatest moments. It presents you with an opportunity to overcome the biggest obstacles and experience the highest forms of joy and success.

Me: So the biggest challenges precede the biggest successes?

God: They do, usually.

Me: And these cycles are part of my constructed experience?

God: Yes. You have created many cycles for your experience here on Earth. Long ones and short ones, big ones and small ones. All of them help you grow and mature your soul and spirit.

Me: So why hide all these cycles?

God: They are not hidden. Now that you have seen and understand the seven-year Shemitah cycle do you really think it has been hidden?

Me: Not at all. When I look back it seems so obvious. As a matter of fact, the stock market has had its largest crashes ever exactly on the last day of the last two Shemitah years called Elul 29. On September 28, 2008 the DOW dropped 778 points and on September 19, 2001 the DOW dropped 685 points. Both happened on Elul 29 and the end of the current Elul 29 is September 13, 2015.

God: That's correct but it is even more obvious than that. The head of the IMF, Christine Lagarde, gave an entire speech in 2014 to the National Press Club about "The Magic Number Seven."

Me: I did hear that speech. At first, I thought it was the weirdest thing a head of such a large financial entity ever uttered but now it makes perfect sense. She was talking about the Shemitah and warning her colleagues that this is going to be a Big One.

God: Yes, and she can make it happen with just a few words if she wanted to force the issue. So can many other Jewish leaders of your financial institutions.

Me: So it's not hidden and is going to happen.

God: It was never hidden but this cycle is not a requirement in life and it may or may not occur.

Me: So the coming Shemitah is not set in stone.

God: Of course not. Nothing is. This is your experience that you create so it's up to you.

Me: So if I want it to happen it will.

God: Yes.

Me: I can't wait for it to be over with! I want the Shemitah to come and destroy the system and be gone. If we make it through this time of turmoil, can we live "happily ever after"?

God: Hmm. Does that seem like something you would choose to experience...forever?

Me: I guess not but it would be nice for a while.

God: How about until the next Shemitah in 2022?

Me: WHAT?! You mean we have to go through this Shemitah thing all over again?

God: It is part of the experience that you have chosen. Cycles do not end just because you survived a big one. Life goes on and more challenges will present themselves as designed.

Me: What if I don't want it to happen like that? Can I stop it?

God: Of course. Everything depends on your free will and what you want to experience in life.

Me: Hmm. I suppose I can't just say I want it to happen or not. I have to really mean it down deep.

God: You have created this experience to your own specifications. Yes, you can change it but then you may start moving away from your greater purpose and the reasons you came here. The things you wanted to learn and experience are all set up for you according to your original design for your life.

Me: So it's all baked into what I am going through now?

God: Yes. Again, this is your desired experience.

Me: If I chose to set up all these cycles in my experience here on Earth, what about everyone else who is on Earth experiencing the same thing that I am? Did they also choose to have this same experience?

God: Yes, although many have chosen their own specific customization. No two experiences are the same but all work in harmony with each other to optimize the experience.

Me: Do you mean that on some level this is a group effort?

God: Of course it is! As you have seen, there are many people of like minds to what you are interested in. They are just as much creating and participating in this experience as you are.

Me: These cycles that are manifesting, are they my own idea or was this a collective idea put in place before we all came to Earth?

God: Look at them as experiences being chosen from a template. You decide what you want to experience and learn in life and then you choose to become involved with situations that will present the proper obstacles and potential solutions to fit your goals.

Me: And what if I screw up or change my mind about what I want to experience and it doesn't go the way I had planned?

God: All experience is positive for your spiritual growth. Sometimes you learn a lot more from your failures than your victories.

Me: So these cycles are setup to constantly shake up my world and tweak my experience so I am forced to adapt and create and grow.

God: Yes. That's a good way to put it although I would change the word "forced" to something like "encouraged" as it is more in line with the boundaries of your free will during the experience.

Me: And I can't really screw up because I learn from both my successes and failures.

God: Yes.

Me: And what happens if I am not successful in experiencing what I had originally come here to experience?

God: You can try again if you'd like or you can move on to experience something else.

Me: You mean I get a "do over" in life?!

God: If you want it...yes.

Me: I like that. It takes some of the pressure off to do everything the right way.

God: The only pressures that are put on you come from yourself. You are your own Judge and Jury in determining your success or failure in your time on Earth.

Me: Given the degree of challenges I see going forward I'm sure I will fail on multiple levels. I bet I will be hard on myself.

God: There's no need to be. Just showing up in the current situation is a victory of sorts. It took a lot of courage to come here during this time of turmoil.

Me: I guess it did. I hope I can make a difference and do some good in the time I spend here.

God: You already are, Bix, and you already have.

END

Chapter XI

Silver Goes Nuclear

Me: Let's talk about some silver secrets.

God: Oh, goodie!

Me: First the big one – the physical silver used in the making of the first atomic bomb.

God: Yes, that's a big one on many levels when discussing silver.

Me: How so?

God: It had ramifications in the United States spanning over national security issues, the monetary system, the manufacturing infrastructure, the free-markets and more.

Me: Sounds like a very big deal for the little shiny metal.

God: It was.

Me: We should give some background on the silver used in making the atomic bomb.

God: Ok. Why don't you start and I will fill in the blanks.

Me: Sure. The project to create the first atomic bomb was a secret. It was codenamed the Manhattan Project and it involved many scientists, military personnel and people in key authoritative positions within the US Government to facilitate its construction.

God: Yes, and the United States was in a hurry to complete the project because they were told by Albert Einstein in 1939 that Germany was already trying to purify Uranium-235 in order to make their own nuclear bomb.

Me: I guess that's the beginning of the term "arms race".

God: Well I would argue that "arms races" have been going on since the beginning of time but why don't we just say the current Nuclear Arms Race began at that time.

Me: Ok. With World War II heating up in the early 1940's the US was going all out in their efforts and created the largest secret city in the history of mankind in Oakridge, TN in order to manufacture the necessary components and process the uranium for the bomb.

God: Yes, and a key step in the manufacturing process was to make a purified form of Uranium so the atoms could be split creating the nuclear detonation. In order to do this they had to build the largest electro-magnet in the world that was called a Calutron. The scientists claimed that for the

process to work the magnet had to be made with the best conductor of electricity known to man – Silver.

Me: But silver was not exactly a worthless piece of metal in those days. Silver was used as MONEY which was both good and bad for the project. It was good because the US Treasury had a huge stockpile of silver coins sitting idle in their vaults being used as part of their monetary reserves. It was bad because silver was very valuable in it's use as money and if word got out that the US had emptied their vaults it could cause financial turmoil around the world.

God: They were in a bind but they made the decision that the successful production of a weapon so great was more important especially since the Germans were also working on creating the atomic bomb.

Me: So they took the silver out of the US Treasury vaults and proceeded to melt down the silver coins to make the Calutron magnets. They didn't tell anybody about using a huge portion of their monetary reserves to facilitate the production of the nuclear bomb.

God: That is correct. It was secretly classified and then later formally classified under the National Security Act of 1947.

Me: And they needed a LOT of silver. I heard on a History Channel program that they had to melt down over 450 Million ounces of silver to make the Calutron magnets.

God: That is the official story. When the secrets of the Manhattan Project came out in the 1970's, the US Government claimed to have shut down the Calutrons and returned the silver to the US Treasury in the early 1950's, replacing the silver magnets with copper ones.

Me: Holy Cow! I know it's a lot of silver but I don't get why they would swap out the silver for copper so soon after inventing the most powerful weapon in the world. Why would they risk it?

God: They didn't of course. The invention of the nuclear bomb changed the balance of power in the world and the US military could not risk losing

such a highly technical and important weapon just to put the silver back in the US Treasury vaults. As a matter of fact, when the silver Calutrons were first tested they didn't work right and had to be reengineered to make the process work.

Me: There is no way they would have risked not having the facility work just to put the silver back in storage.

God: No way.

Me: What does make sense is that they lied and told the world that the silver was replaced with copper when it never was.

God: And that is exactly what they did. The Calutrons were not shut down until the 1990's when a new and more reliable method of purifying Uranium was already being used.

Me: That's interesting. The mid 1990's was the beginning of the "Strong Dollar Policy" in the United States which many believe required the suppression of gold and silver prices. Could that be why the US shut down the Calutrons, to get the physical silver into the market to help suppress the price of silver?

God: That is exactly why. If you look at the silver exports out of the United States in the years 1995-1998 they jump up from a historical average of 10M ounces per year to over 100M ounces per year for each of those four years. There is no other way to explain the 10 times growth in silver exports during this time as silver mine production stayed relatively steady in the United States.

Me: It must have all been going to the LBMA in England to help suppress the price of silver.

God: That as well as to China to pay off some old debts and start some new silver rigging structures.

Me: That's crazy stuff but it's all verifiable in the records and data.

God: It is.

Me: So now that everybody knows what happened what were the ramifications of it all?

God: This one use of silver from the vaults of the US Treasury has been a driving force behind the removal of silver from the free markets and the strict control over the price of the metal. It was a National Security issue of the very highest magnitude and the ramifications of this action are still present in the silver markets today.

Me: I understand how it was very important back then but why is it still so important? We don't use the Calutrons anymore so why continue to suppress the price of silver?

God: It is not very easy to return to a freely traded, free market price when the control has been so pervasive for decades. There has not been a single day since the 1940's that the price of silver has been determined in a "free market." It is always rigged and controlled.

Me: What about when the Hunt Brothers took the price up to \$50 per ounce in early 1980? Was that really a manipulation by the Hunts to corner the price and drive it higher?

God: Not really. Although the Hunts were the largest holders of silver, the price was still controlled on the COMEX by the bullion banks working for the US Government. It was Federal Reserve Chairman, Paul Volcker, that devised a way to get the Hunts out of their silver position by suckering in weak hands and driving the price up from \$20 to \$50. Then when the buying frenzy ended he slammed the price back down with computers and derivatives thus killing off the silver sentiment and regaining control of the silver price. The Hunts made the mistake of using leveraged paper silver positions on the Government controlled COMEX and were destroyed on the forced price drop.

Me: Wow! That's the same exact thing that JP Morgan did in 2011 by pushing the price of silver from \$20 to \$50 and then slamming it down again! No wonder they call the COMEX Exchange "The CRIMEX"!

God: Yes, and they were orchestrating these operations with the consent and authority of the US Treasury, US Regulators and the Exchanges.

Me: But how can this ever end if all these official entities keep interfering in the true price discovery of silver? They dress up the manipulation of gold and silver as requirements for our system to function so they can always justify the manipulation.

God: The manipulation will end when it no longer benefits those approving the manipulation.

Me: You mean the United States. When the United States no longer benefits from the manipulation, then it will end.

God: Yes.

Me: If you ask me that time is approaching fast because the US is clearly losing their grip on the control mechanisms.

God: Yes, it is time for them to end the game.

Me: And then the true story can be told about the REASON silver has been so suppressed all these years and all my Silver Bug friends will be proven right!!

God: Yes.

Me: Thank you God. See you at the Silver Celebration!!

God: See you there :)

END

Chapter XII

Work to Live/Live to Work

Me: Let's talk about the jobs we do to survive in this economic system. I love the saying "Do what you love and the money will follow." Is there any validity to this statement?

God: The first part of the statement is much more important than the second.

Me: How so?

God: Doing what you love will help guide you on the path towards the experiences in life you have chosen. Unless money is a part of that experience, it is not important on your personal path.

Me: I know that money doesn't buy happiness but it is needed to survive on Earth in the economic system that we created and live in.

God: No. Money is not needed. Money in your economic system makes some things easier and some things harder. I tend to like the quote "The grass is always greener."

Me: Are you sure? Poor people look at the rich and want their lifestyle but do the rich look at the poor and think the same? I don't think so.

God: You are approaching the concept of money the wrong way. The Meaning of Life is to experience life to it's fullest. The triumphs and failures; happiness and sadness; love and hate: those experiences are why you choose to come here and having money does not make these experiences better or worse.

Me: I suppose so. The feeling of achievement can happen if you are rich or poor.

God: Oftentimes it is the overcoming of obstacles that elicits the most joy and happiness: the more difficult the obstacles, the greater the feeling of achievement. Would you rather conquer big problems or little ones?

Me: I guess the big ones since that's why I'm here.

God: It is your choice and deep within your soul you know all the reasons why you chose to come here. Some have come to experience the little things and some have come to experience the biggest problems imaginable. Everyone has their own script of how they want to live their lives.

Me: Very well but what about those people who hate their jobs, feel stuck in the system and never get to do what they love to make a living?

God: The reasons they chose to experience this existence will present themselves to them no matter where they work or what they do. From the moment they wake up in the morning until the moment they go to sleep at night. Their life's mission will play out on every level.

Me: So it doesn't matter if people love or hate their jobs?

God: It's totally and completely up to them. They are creating this experience.

Me: So if I hate my job it is what I have chosen to experience and I should just accept it as my fate and the same goes if I love my job?

God: Yes. Both will provide you with ample choices to experience your life's plan on Earth and you have the potential to come away with valuable life lessons when you leave this world. Neither is better or worse, it all depends on what you had planned out for yourself to experience.

Me: That's interesting but I know, for me at least, that I would rather love my job than hate it. If I hated my job I would naturally look to get out of it and change what I was doing.

God: And that is what you have chosen.

Me: Yes, I'm sure it is but what about those people who hate their job or want another job but are too afraid to make any big changes?

God: You just described a very common experience that people on Earth have chosen for themselves.

Me: What do you mean?

God: To confront your fears and have faith in yourself and your abilities is a very rewarding experience. One that many people have chosen and many people are working to experience fully these days.

Me: Hang on. That's kinda like what's going on with our economic system lately. For years we have been too afraid to change the status quo and so the

economic controllers and market riggers have thrived. We are too scared to change it so we haven't allowed change to happen.

God: Yes. It is true for the individual as well as for your society as a whole. Fear is a very powerful force that can hold you back from achieving your goals but breaking out of that fear can be very exhilarating and rewarding.

Me: Is that why President Roosevelt made that speech "The only thing we have to fear, is fear itself"?

God: Yes, that is exactly why.

Me: Interesting since he was living through a very chaotic time in our monetary history with the Great Depression and the confiscating of gold in 1933. Was he working for the Bad Guys to assist in the destruction of our country, as some believe?

God: No, exactly the opposite. The confiscation of gold was not to take the power of gold money from the people but rather to take it out of the reach of the bankers and the elite that were trying to steal the people's gold and destroy America.

Me: How so?

God: One of the easiest ways a Bad Guy can confiscate wealth is to destroy the system and confiscate the real assets that they hold in trust for depositors. In the 1930's gold was money and the people of the United States held most of it on deposit in bank vaults. The US gold confiscation in 1933 took the gold out of the hands of the private banks and the Bad Guys before they could take it for their own.

Me: But the gold was never returned. As a matter of fact the stated value of it was changed from \$20 an ounce to \$35 an ounce right after it was confiscated.

God: Yes. This was done to stave off the hostile takeover of the United States by a group of industrial tycoons in what was called "The Business Plot." US General Smedley Butler exposed the plan to President Roosevelt and the US Congress. A decision was made to confiscate the physical gold

as well as other maneuvers to stop a potential coup. Ultimately, the plot was stopped but the gold could not be allowed back into the hands of the public because those who wanted to steal it surely would have figured out a new way to do take the people's gold.

Me: Interesting. So the confiscation of gold in 1933 was not a theft from the people by the US Government but rather done for their own protection due to the fear of losing the people's wealth to the Bad Guys.

God: Yes.

Me: So will we ever get over all this fear that has held us back and perverted our economic and financial systems?

God: That is up to you, of course.

Me: And I believe that is what we are doing right now.

God: It is.

Me: Boy what a great accomplishment THAT would be!!

God: It's a biggie alright, but don't start taking your victory laps too soon. There is a lot to do to get from here to there.

Me: Of course, let's get back to work.

God: Lets.

END

Chapter XIII

Technology and Workarounds

Me: Here's a tough one God. Computers and technology are so pervasive in our society today, what happens if it all goes away?

God: You will have to rely on yourself again.

Me: What do you mean?

God: You did not come into this world with computers and technology. They were a creation by you to assist you in performing certain duties that you thought was better handled by someone, or something else.

Me: You are correct that computers and technology, like the Internet, are very new to humans. The first computers were invented in the 1940's and 50's and really didn't get into the hands of the people until the 1970's and 80'.

God: And with the invention of the Internet in the 1990's the world decided to use this form of communication to replace the older inventions such as postal mail, television, encyclopedias, newspapers...all sorts of information sharing avenues. Even the telephone is being taken over by the Internet.

Me: I know. It's crazy how much time people spend on their smartphones these days. Texting has practically replaced talking in the younger generations!

God: Yes. Interesting isn't it?

Me: Yes, but it seems to me something is being lost in these new forms of communication. It is more instantaneous and more sterile. There is less one on one verbal and physical interaction. It feels wrong.

God: I wouldn't say wrong. I would say different.

Me: How so?

God: Technological breakthroughs are just as much a part of your evolution as your spiritual growth. With new innovations come disruptive technologies that force you to change and adapt. That is a very important part of fulfilling your life's purpose as it provides the most possibility to succeed in changing, growing and experiencing the more dynamic moments in life.

Me: True but aren't we getting TOO attached to these devices? I mean, what happens if it all suddenly went away? I've read a lot about how an Electro Magnetic Pulse or a Solar Flare could easily destroy everything electronic. Then what would we do?

God: Then you would return to where you started. Then your technology would start again only in a different way.

Me: But it would be devastating. Almost EVERYTHING runs off technology these days from TV's to cars to power plants...all of it. All of it is required for the system to run smoothly and yet it is so fragile.

God: Yes. As with all new systems and technological advances they begin as very fragile tools. Over time they strengthen if you find them of use but sometimes it takes a Creative Destruction Event to “harden” the tools.

Me: Creative Destruction Event? You mean like the ones we see in the economic impact of innovation? The economic theory is that the introduction of new products necessarily replaces the old ones thus driving innovation and economic growth. Although there will be struggles for those people tied to working in the companies making old technologies, there is growth and employment in the companies producing the new technologies.

God: Yes, but it's not just true in economics. It can be applied all throughout your experience on Earth. This process is not a stagnant one. It is always evolving and always striving to change and improve. Sometimes it takes a very big shakeup to both remove the weaker parts of the past systems and strengthen the best parts moving forward.

Me: But the chaos that will ensue if our technological communication systems go down would be catastrophic! Everything relies on it in today's society. Everything would fall apart from food delivery systems to power systems to even the delivery of information! We won't even know what was happening because there would be nobody at the other end of the phone, computer or radio to tell us - NOBODY!!

God: But you didn't start your life with all these forms of communication. You started with nothing but yourself. Surely you could make your way without it all.

Me: Maybe I could but most people could not. Without technology so many people would die. It would be catastrophic. I don't want that to happen.

God: And so it won't. It seems you have chosen for that to not happen in that manner.

Me: Good.

God: So where do you want to go from here? What's next for technology in your world?

Me: First of all, I want to warn other people that we need to make our technology stronger to protect against an EMP or Solar Flare. I also think we should become less dependent upon technology in the first place.

God: And how would you propose to do that?

Me: At the very least we should have a back-up plan if the technology fails us. We should setup policies and procedures to INFORM the public of the potential scenarios. If people are aware and have some sort of plan on how to deal with the catastrophic scenarios, we would fare much better during the chaos.

God: Sounds very bureaucratic. Your government is not exactly hell bent on protecting the population at the moment. They are more about protecting themselves and preserving their own power.

Me: Then we need to get rid of those in power or we should do it ourselves.

God: Two very good ideas. How are you going start either?

Me: I think we should start both! We can get rid of the politicians when the system falls apart if we stand up against them rebooting our current political structure. Clearly, if everyone loses everything in this Global Monetary System there will be cries from the people to stop their rule over us.

God: I believe you are correct.

Me: In the mean time, since we can't rely on the government to fix the weaknesses in our technological infrastructure, it will be up to the free-markets. Once the problem is widely known there will be people who step forward to fix the problem with stronger and better systems.

God: And workarounds.

Me: What do you mean by "workarounds?"

God: I mean working to fix problems by using different solutions.

Me: Like what?

God: Take the GMO's (Genetically Modified Organisms) that are being forced upon you. Many people were not happy with what was happening and now you have organic produce. Even though it is more expensive, organic produce production is growing by leaps and bounds. You can see it in your grocery store produce section. Ten years ago it was rare to find an organic vegetable section and now they are in almost every grocery store in America. That was a workaround.

Me: I see what you mean. Go on.

God: Workarounds develop naturally in a free market. It is happening now with one of the most important industries in the world...banking. In the past you held your money in the bank and you had a passbook where the bank recorded your transactions. With the advent of computers all that was turned into digital money and digital credit.

Me: That has not exactly worked out well unless you are a banker.

God: Very true, but with the realization of this fact in the past few decades, other workarounds are developing.

Me: Like Bitcoin and the crypto-currency movement.

God: Yes but there are more. There are companies that store physical gold and silver and give you a debit card to spend it as you wish. Even Apple Computer has introduced something called "Apple Pay."

Me: But isn't Apple Pay just a payment system linked to a credit card at a traditional bank? How is that any different from just using a credit card?

God: It currently isn't but if the banks crash, Apple Pay will be one of the many choices going forward.

Me: How so?

God: Although Apple Pay is currently linked to a traditional bank credit card it is not much of a stretch to link the system to one or all of the cryptocurrencies that are being developed!

Me: You mean we may be able to buy and sell things in Bitcoin with our Apple Pay apps on our iPhones?

God: Sure. The technology is there and it would be easy for Apple to make the switch.

Me: This is all so speculative. I mean who knows how this will all work out?

God: Nobody knows but the workarounds are all taking shape in preparation for the Creative Destruction Event as related to your monetary system.

Me: I guess so but it still all depends on whether or not the Internet and the technological infrastructure stay in place.

God: Yes. It does.

Me: And if it doesn't, then we rebuild with stronger systems and better workarounds.

God: That's the spirit!

Me: Let me tell you God, this is all very scary when I think about having to live through this kind of transition.

God: You want scary?! Think about none of this happening and those that control you now maintaining that control and falling further and further into the dark future they have planned for you.

Me: Oh my God, you are right! If we don't choose to change everything we are doomed.

God: Now which is the scarier choice?

Me: Their plan is scarier. Their plan for us is scarier by far. We must end this insanity all together and end it now! We must end it for good!

God: That's my little warrior.

END

Chapter XIV

All You Need Is?

Me: Let's talk about what humans need. What we can't do without.

God: Good Topic.

Me: I know the spiritual side is much more important than the physical side of our existence but why is there such a stronger urge to fulfill the physical side? I don't feel the same urge to fulfill my spiritual growth that I do with the physical side.

God: That's because your spiritual side is full: completely and totally. You are already a spiritual being that has chosen to experience the physical reality.

Me: Hmm. That's interesting because I look around and see a huge lack of spirituality in the human race, and it seems to be getting worse and worse over time.

God: Yes. You have chosen this because you wanted a bigger challenge.

Me: A bigger challenge means a bigger reward, right?

God: Most of the time.

Me: So is our great big challenge to get back to our spirituality at the end of our lives?

God: No. You are already spiritually complete. You are here to experience the physical life; a physical presence that offers more challenges and more potential outcomes. When your life is over you will return to the spiritual realm with these new experiences.

Me: So striving after physical "things" is not bad. Is that what you are saying?

God: There is no good and bad. There is only completing and fulfilling what you have come here for. If you think your life's purpose that you constructed for yourself was to obtain physical things - then so it is.

Me: That sure doesn't sit right with me though.

God: And so it doesn't. That should give you a sense that your goals here on Earth are not the obtainment of physical things.

Me: I think you are right.

God: Yes. I think I am too.

Me: So I have a different purpose for being here than everybody else?

God: Yes. You are all spiritual beings that have incarnated in the physical form for your own reasons. Some of these reasons are very complex and involve both your own personal growth and the growth of your community and society.

Me: Is there one common denominator between everyone?

God: Yes. Love.

Me: How do you mean?

God: Love is where you began your physical experience and love is where you will end up.

Me: I understand that love is where you begin as anyone can see the beauty and innocence of a baby. In most cases babies start from the love of two humans and surely there is a bond built between the parents during the pregnancy and birth. Even those who reject it have a deep seated emotional attachment to their child.

God: Yes. It is there from birth.

Me: So even if a child's parents are the worst kind of people, the child begins with love.

God: I wouldn't put it that way since there is no better or worse sort of person as all have their challenges to go through in life.

Me: I see but at the beginning of a child's life he or she is sourced from love.

God: Yes, that's what you have in the spiritual realms - pure love, unconditional love.

Me: But when we incarnate into this physical experience that love is not remembered. We may start with it but it surely doesn't stay with us throughout our lives.

God: That is what you have chosen. That is part of the process you put in place so that you can really experience the physical realms.

Me: Will we return to the spiritual realm when we leave our bodies and feel this pure love once again?

God: Yes...but added to it will be your experiences in the physical realm: the good and bad, the happy and sad. All that you experience on Earth will accompany you back to the spiritual realm.

Me: I guess that would enhance the feeling of pure love. Knowing the pain of my failures and the joy of my successes should strengthen the feeling of pure love in the spiritual realm.

God: Yes. It does.

Me: So tell me why you say we leave this world with love. What about those who had miserable experiences here on Earth? What about murderers, rapists and thugs? What about those who live horrific lives and die horrific deaths? How do they all leave this world with love?

God: They are all spiritual beings that chose to incarnate on earth to experience the physical realm. When they return to the spiritual world all their pain and hatred goes away and they are engulfed in the pure love that permeates the spiritual realm. There is no judgment other than how they judge themselves on if they completed their life's mission - the reasons they chose to join the physical realm.

Me: And what about those people who know a kind and loving life and ease into death with many loved ones? Did they complete their mission in life?

God: Everyone has their own goals and desires that they choose to pursue. There are as many choices in the physical realm they choose to experience as they can imagine.

Me: Because I am manifesting my own reality.

God: Yes.

Me: Let's talk about the strength of love within humans.

God: It is very powerful. It feels good because that is the feeling in the spiritual realm. All the times you encounter the feelings of love during your physical life are linking to your spiritual essence. Your soul stays with you during your experience in the physical realm.

Me: Interesting. So there really are parts of the spiritual world here on earth as we experience it through the feelings of love.

God: Yes.

Me: Cool. So “all you need is love,” as John Lennon would say!

God: Ha. I love that song but it’s not entirely true.

Me: Why not?

God: You already HAVE love, eternally and forever in the spiritual world. It is the road you take guided by love that matters most in the end. Love is merely a motivator along your path and your soul knows that you will always return to love in the end.

Me: So the brief glimpses of love that we experience on Earth are a driving force but not the most important thing. The most important things are the experiences and interactions that we have on Earth.

God: Yes. Love simply helps trigger and guide you on your mission. It steers you towards your purpose and the reasons you decided to come into the physical realm.

Me: So those words in the song, “*All You Need is Love*” ring true because love helps guide me towards fulfilling my true purpose that I gave myself here on Earth.

God: Well put, Bix.

Me: So you got it wrong when you said, and I quote, “I love that song but it’s not entirely true.”

God: I would say that is a matter of interpretation.

Me: How so?

God: Love is not the goal. Love is a guide. It is a spiritual guide that leads you to what you choose to experience. Love is not all you need because you already have it, forever and always.

Me: Ok, but can humans reach their goals without love as a guide?

God: Of course, it is just more difficult.

Me: That makes sense. Because we do not remember, in the physical realm, what the plan for our life is, love gives us the opportunity to discover it through our experiences. We get to live it instead of just learning about it. It gives our soul a more thorough understanding of the concepts we choose to experience. The feelings of love can help guide us towards that which we wish to experience but it is not absolutely necessary that the feelings of love be present to guide our path.

God: Yes.

Me: But it sure feels good when love is here with me.

God: It sure does and it is the strongest motivator you have given yourself to fulfill your mission in the physical realm.

Me: Thanks for this God. Can I say: “I love you” to you?

God: Of course. I love you too Bix.

END

Chapter XV

The Four Senses

Me: God, I'd like to talk about our human bodies and how they relate to the soul and spirit.

God: Sure.

Me: Are we our bodies or are we spiritual beings or are we both?

God: You are not your body. You are very separate from your body.

Me: I have a gut feeling about that but how can it be?

God: Your body is a vehicle that your soul has chosen to experience life on Earth. You came into your body after you were born and you will leave your body behind when you die.

Me: What do you mean I came into my body *after* I was born?

God: You chose to incarnate on Earth in a specific body but your spirit did not fully enter your body until you were a young child.

Me: I don't get it. Are you saying that babies don't have souls? Or spirits? Wait, what's the difference between a soul and a spirit?

God: Whatever you want it to be. There is no difference as we are all one. Mind, body, spirit, soul, you, me...all are ONE.

Me: Sure but I've heard people say that the soul is the part of your spirit that is grounded in your physical body and your spirit has the ability to travel in and out of dimensions and realms.

God: Ok.

Me: Well is it true?

God: Like I said. It is whatever you want it to be. If you wish to separate the spirit and soul to understand the concepts better that is totally and completely up to you.

Me: Ok. Back to how our souls don't enter our bodies until we are older. How does that work?

God: Babies begin with a spiritual essence of their soul but they do not fully incarnate into their bodies until they are a few years old.

Me: I still don't get it.

God: Ok. Let's try this. Think of your body as a custom-built car that you are having made for your own use. You picked out your own frame, engine,

color, components and accessories. You picked all the specifications and features and then it took about 9 months to build in the factory.

Me: I get it. Just like when a woman is pregnant with a baby. The woman is the manufacturing facility.

God: I would suggest you not be that specific when speaking to a pregnant woman but yes, just like that.

Me: So, like a car that came off the production line, wouldn't my soul be fully connected to my body at birth?

God: Not in most cases. Like the custom car that comes off the production line, there are still more things to be done to the car before you take full custody of it. The car must be conditioned, fuelled up, tested and tweaked just to your satisfaction before you take full ownership.

Me: But it's not exactly like a baby because I would never reject a flawed baby like I may a flawed custom-made car!

God: Come on Bix...it's just an analogy!

Me: Ok but it's not a very good one.

God: Why not?

Me: Because of what I said, I would never reject a flawed baby like I would a flawed car.

God: It's not about accepting or rejecting. You are manifesting this experience to your own perfect specifications. Those things in a person that you call "flaws" are actually blessings for the experience you are choosing here on earth. They are challenges that help your experience.

Me: Oh, I get it: the greater the challenge the greater the potential successes in this experience on Earth.

God: Yes.

Me: Ok. I'll accept that premise. Now if everyone comes into their body at different times, do we know when our souls fully entered our bodies?

God: Yes, at the time of your earliest memory.

Me: Interesting. In my earliest memory I was about 3 or 4 years old. I remember looking out a window at my parents getting into a car and I was scared that they were leaving me. I wanted them to take me with them. It felt really traumatic to me at the time.

God: Strong emotions are what many people experience when their souls are fully incarnated into their human bodies. It can be strong feelings of pain or joy or laughter or love when the soul enters the body.

Me: Hmm...it must be very shocking for a soul to incarnate into the human experience coming from a place of pure love into a place where all other emotions can be felt.

God: Yes, but it's that variety of experience that made the soul want to incarnate in the first place. The wide array of potential challenges, experiences and outcomes is what your soul is looking for when you incarnate.

Me: Why can't I remember what my soul has experienced in the past when I am on the Earth in my physical form?

God: You chose not to in order to more fully experience the human existence. If you knew everything then you would not be as surprised or happy or sad by the outcomes of all your challenges.

Me: Interesting. I guess the five sensory organs that humans use here on earth are not present in the spiritual world.

God: No, they are not necessary. Oh, by the way, there are only FOUR sensory organs.

Me: What? There are five senses: sight, hearing, taste, smell and feeling.

God: But there are only four sense organs.

Me: There are five! For sight you have your eyes, hearing you have your ears, tasting you have your mouth, smelling you have your nose and for feeling you have your hands.

God: Really? You don't think you can feel anything without your hands?

Me: Wait. Not hands. You feel with your nerve endings.

God: Interesting thought but what about feeling things that don't need nerve endings?

Me: I don't get it...like what?

God: How about pressure or temperature or pain? None of these require nerve endings to feel and yet you still physically feel them.

Me: I see what you mean. I guess that feeling doesn't have a specific sensory organ.

God: Like I said, only four sensory organs.

Me: So should feeling be considered a sense even if there is no single sensory organ connected to it?

God: Sure. Why not? You made up this classification system so you get to make the rules.

Me: Then what about other things we feel that are not physical, like emotions? Things like joy and happiness, anger and stress can all trigger physical reactions and responses in your body.

God: All great feelings that assist you in your experience here on earth.

Me: Yes, but it seems that we are lumping a lot of these experiences into the "feeling" category of our experience.

God: As you should. It is the most important distinction between your experience on Earth and your experience as an eternal spirit. Feeling is a direct connection from body to spirit and feeling is your best guide to fulfill what you have chosen to experience here on earth.

Me: So feeling, although it doesn't have a dedicated sensory organ, is my most important sense.

God: Yes, and the other four senses all initiate a feeling when experienced in different ways.

Me: How so?

God: When you hear music or laughter it initiates a feeling within you. When you speak you can communicate feelings to others. When you taste food it satisfies your feelings and urges and when you see things like beauty or ugliness it can make you feel very strong emotions.

Me: Wow! It's true. All senses do trigger feelings.

God: That's why I recommend "following your gut" as much as possible. Feelings are the soul's way of steering you in the right direction.

Me: Interesting. Thanks God.

God: You are welcome.

END

Chapter XVI

Musicians, Artists and Superstars

Me: Let's talk about why musicians and artists and sports figures are so admired in our society. They are idolized by people around the world and rewarded with fame and fortune. I can't believe how much money some of them make! Sports figures especially. Are they really worth it?

God: They are worth what you are willing to pay them.

Me: But it seems so lopsided considering what they are doing in comparison to a doctor that saves lives or a teacher who passes on knowledge or a humanitarian that strives to help the needy.

God: All are noble causes and all help them with their missions here on Earth.

Me: But why are rock stars and great athletes so much more revered by our society? It doesn't seem right.

God: There is something very special about those whose lives are dedicated to the creation of something new. Songwriters, artists, athletes and poets are all creating new and different experiences than have ever been created before in the history of the universe. It is creation that is most desired because it is something NEW that will be added to the universe.

Me: So just because a doctor or healthcare worker is not creating something new they are not revered as much?

God: There is beauty in what they do as well and they give and receive great joy to individuals but it is usually on a smaller scale with a smaller audience. Athletes, writers and artist can touch all of humanity on a large scale and their work is a manifestation of the reason you are here.

Me: You mean to experience life to the fullest and learn lessons to forward our evolution.

God: Yes, but ultimately you are bringing something NEW into the universe and that is very, very powerful. Some even consider the process "God-like."

Me: How so?

God: Because God is the ultimate creator. The creator of all things and all experiences and when a human being creates something new they are assisting in God's work.

Me: But I thought we were all part of God and God was part of us.

God: Of course you are and by creating something new you are PROVING this reality. That is a very special thing to do and why it is revered by so many in your society.

Me: I understand that artists create something new but why lump athletes into this group of creators? What are they really creating by running the fastest mile or scoring the winning goal?

God: They are creating unique and exceptional experiences if only for a moment in time. The rush you feel when you witness such a spectacular performance reverberates through human consciousness and increases the vibration of people. It creates joy and happiness and awe at the splendor of watching something new and incredible transpire in our experience on Earth.

Me: I know that feeling and I agree that it is incredible and hard to reproduce on your own. I guess athletes should be grouped in with others that are unique creators in our society.

God: Yes, they should.

Me: But where does this ability to create something new come from? Can anybody do it and should it be something we strive for?

God: Everybody has their own purpose for being here and they have selected how that experience will play out. Having said that, there is an inner desire to connect with Source, with God, that drives humans to be creative in their endeavors.

Me: Some more than others, right?

God: Yes, it all depends on what they are here for.

Me: Is that why some people are naturally talented at creating things and others are not?

God: Yes, but don't think that those people who have natural talent have more of a chance of leading a fulfilling life. Oftentimes it is those with little natural talent but very strong work ethics that succeed well above what they thought they were capable of.

Me: That sounds like a more fulfilling life than just being born with talent.

God: For some it is, but for people born with great natural abilities, life can also present huge challenges to overcome.

Me: Like what?

God: Like dealing with the expectations of those who put their faith in that natural ability. There are pressures exerted on those with natural talent and ability that far exceed those with little talent. Oftentimes that is the life plan for the highest creative achievers: trying to deal with the "God-like" powers that they possess.

Me: Interesting. I never thought of it like that but I can see what you mean. One hit wonders in the music business, famous child actors and college superstar athletes that never produce the same results as a professional so often end up with destroyed lives as they get older.

God: Yes, it is a very difficult life plan they have chosen. To be revered at one moment early in their lives and then never get the same admiration or live up to the same expectations of others for the remainder of their time on earth.

Me: Ouch. That must be difficult.

God: It can be.

Me: I guess it gets back to "the grass is always greener" metaphor.

God: It is just one of the many juxtapositions that your existence on Earth can present. It can also offer up some of the greatest challenges to be overcome.

Me: Which is why we are here, right?

God: Correct.

Me: So hail to the creators here on Earth with us today!

God: Don't get so carried away Bix. Those who have what you would call "normal" lives are just as significant and important as those who have "abnormal" lives.

Me: I understand. Ghandi once said, "Whatever you do will be insignificant, but it is very important that you do it." Is that true?

God: Very true.

Me: Why? What does it really mean?

God: It means that your experiences here on Earth were meant to be your own creation for your own growth and enlightenment. Even though what you do may not have a gigantic effect on humanity, the collectiveness of all these human experiences is the reason we are all choosing to be here.

Me: What's the alternative?

God: The alternative is not being here and to not experience the joys and disappointments of life. The thrills and spills and chills of living. The alternative is NOT to exist in the physical form at all.

Me: What's wrong with that? The spiritual world seems like a great place to hang out for eternity.

God: It is...but it can get very boring.

Me: Really? How so?

God: An existence in which all is love and there is no hate or fear or problems gets old very quickly. I know it is difficult to understand when you are experiencing life on earth with all it's problems and stresses but you chose to come down to earth at this time for a reason and that reason was the desire for experiences that are difficult to have in a place of pure joy and love.

Me: It seems strange I would choose to enter into a world of pain and misery on purpose.

God: There is not only pain and misery on Earth. There is joy and beauty and hope and all the things that are made stronger by truly understanding the other, darker parts of living on Earth.

Me: Yes, you are right and I get it. It just seems like such a hard way to experience these feelings.

God: You chose it! You are the one who decided on its difficulty level so you should ask yourself why you made living on Earth so hard.

Me: Good point. I want to do great things so I guess I made my challenge here great as well.

God: That sure sounds like something you would do to yourself.

Me: I guess I'm a sucker for punishment!

God: No – you are warrior in life. Be proud of what you have chosen and continue your battles in life because win or lose, those are experiences that will be cherished for eternity.

Me: Thanks for the pep talk God.

God: You are welcome.

END

Chapter XVII

The Smithsonian Conspiracy

Me: Why are there so many things from our past that have been hidden from the people?

God: That is part of the overall control plan of the “Bad Guys.”

Me: Do they do it to control us better?

God: Yes. It helps those who perpetuate the lies to keep you very narrowly focused.

Me: What do you mean?

God: They don't want you thinking that there are greater powers than them. They want you focusing on going to work, paying your mortgage, watching TV and reading their papers. They don't want you examining the meaning of life or the fact that your life is confined within a small box under their creation and control. They really don't want you questioning religious beliefs because much of their control structures, rules and regulations are bound by religious dogma.

Me: Why is that such a big deal?

God: They want to have the only answers you need. That is why they hide the past from you. That is why they try and remove free will from your daily life. That is why they will not tell you that there have been many, many civilizations of living beings on Earth over millions of years. It doesn't support the paradigm that they control.

Me: So what if it doesn't support the paradigm? What would it matter if we all knew the truth?

God: Then who would support the controller's way of life? If you knew that it was all a lie would you continue to work and struggle and sacrifice just to support THEIR lifestyle?

Me: No way. So that is why they have constructed this matrix we live in...to benefit themselves?

God: Yes.

Me: Tell me about the Smithsonian Institution. I keep hearing that they are involved in covering-up the true history of humanity. I thought they were just the federal agency that runs the national museums. Don't they just store and showcase all of our artifacts like other museums do?

God: No. They are a division of the control structure. Their job is to support and reinforce the historical timeline of the development of human beings that we have been taught. Anything that directly contradicts the official story is confiscated and hidden from view or destroyed before a new narrative can form.

Me: What kind of things do they hide from us?

God: Many things but mostly about the origins of mankind and intelligent life on Earth going back eons.

Me: Like all the mounds and earthworks found in the United States?

God: Yes. The Smithsonian has told the world that they are just ceremonial places and burial sites but they know the truth. The Smithsonian claims they were built by the original American Indians but even the American Indians claim the mounds were there long before their ancestors ever settled in the areas.

Me: Weren't there thousands of giant skeletal remains discovered at these sites with full human skeletons that were 7 to 10 feet tall? They say that's the conspiracy side of the story but there have been many eyewitness accounts of people finding these skeletons. Before the 1900's there were thousands of skeletons being dug up all over North America. The Smithsonian would always be called in to authenticate the bones and every time they brought them back to Washington to be "examined" but they would never be seen again.

God: Yes. Many of these artifacts are held in the secret warehouses of the US Government and even more have been destroyed.

Me: That's what I don't get. Why destroy them? They would be of such great significance to our understanding.

God: They have been destroyed because they are of no significance to those who already know the truth. The importance is in keeping them a secret and the more evidence that is hidden away, the more likely that some of it will leak out to the people. It makes little difference to those in the know if

there are 10 giant skeletons or 10,000 skeletons so most have been destroyed.

Me: Even today?

God: Even today.

Me: And what about other artifacts and strange archeological sites in the US? Are they concealed as well to maintain the narrative of the status quo?

God: Yes. Everything from Egyptian hieroglyphs to ancient tunnel systems to proof of alien habitation has all be found in North America and all have been hidden from the public.

Me: That's infuriating to me.

God: How so?

Me: I bought into the United States being the "Land of the Free" and the Founding Fathers' ideals for America. I never saw anything in the US Constitution allowing the truth to be hidden from the people for the benefit of the controllers! There is no accountability of our government officials to the people anymore. It is sickening. Why doesn't anybody do something to stop it?

God: Many have tried. Many have died trying.

Me: I know. Right before President John F. Kennedy was murdered he gave a speech to the American Newspaper Association saying: *"The very word 'secrecy' is repugnant in a free and open society; and we are as a people inherently and historically opposed to secret societies, to secret oaths and to secret proceedings. We decided long ago that the dangers of excessive and unwarranted concealment of pertinent facts far outweighed the dangers which are cited to justify it."*

God: A prophetic warning to the People don't you think?

Me: Of course but if a US President can't stop the secrets from being withheld how can we ever hope to be fully informed?

God: By removing those who rule you.

Me: A very difficult task.

God: Yes, but you are doing it now. You are much more powerful than you give yourself credit for.

Me: Don't tell me...I am creating this experience so I can change it, right?

God: Yes.

Me: Ok – then I want to change it and I will manifest that change.

God: FINALLY!!

Me: Fine. I get it. How come we always get to the end of these conversations and it comes down to me having to change things?

God: Because if I did it for you then WHY would you even want to have this experience? If everything was solved for you then what's the reason for living and what's the meaning of life?!

Me: Not that again. Didn't we already cover all that?

God: Yes – but you must be a slow learner.

Me: Ha! Fine. Without darkness there is no light. Without bad there is no good. Without hate there is no love. All that Yin and Yang stuff, I get it.

God: Then you also get that if I were to fix all of the problems that present themselves you would get no satisfaction from solving those problem yourself. And it wouldn't end with just the big problems. If the solution is somebody else continually fixing the problem then you would have a life with no problems...do you see the problem there?

Me: Of course. I wouldn't know the joy of succeeding at something challenging. I wouldn't learn any lessons or grow in any way. I wouldn't know the happiness in finding and appreciating a life's partner. If there were no problems, my life would be void of the full comprehension of joy, happiness and love.

God: Now you get it.

Me: So this whole thing about the hidden secrets in the US by the Smithsonian is all part of the joys of discovery and solving problems?

God: Does that sound like something you would have wanted to experience in this lifetime?

Me: Yes. Fine. You got me. Bring on more mysteries and let me have a crack at them in my lifetime.

God: Bravo Bix! Bravo.

END

Chapter XVIII

What's Hidden in the Grand Canyon?

Me: While we are on the subject of hiding things in plain view, let's talk about one of the biggest hidden conspiracies on the planet.

God: Sure. Which one? There are so many.

Me: I'm talking about what was found in the Grand Canyon and how it has shaped our country.

God: Oh, that big one. Where would you like to start?

Me: Let's start with a background of what was found there.

God: Ok. In the late 1800's the Grand Canyon was a very sparsely populated area. Although there were some settlers that had set up small towns near the canyon on their way to find their fortunes out West, the land was very dry and the climate was not ideal for humans. Of course, the rugged terrain also made it difficult for people to populate towns on any large scale. Remember, this was before cars and roads and even railways could bring people to the area.

Me: But there were some classic "Wild West" type towns that sprung up.

God: Of course, but it was still thinly populated and by the early 1900's only a few pioneers lived in the area along the ridge of the Canyon.

Me: What types of people gravitated towards settling around the Grand Canyon?

God: Besides various American Indian tribes that lived in the area, treasure hunters, outlaws, explorers and people who weren't cut out for the big city life ultimately settled the Grand Canyon. They were a very hearty bunch.

Me: Although there weren't many people settling in the area, some towns and cities did spring up in the early 1900's. What brought people there?

God: Tourism mainly. The Grand Canyon is one of the most beautiful places on earth and once the Grand Canyon Railway was opened in 1901 the tourists came by the trainload. After WWII it was estimated that over 45,000 tourists visited the Canyon every year. Today that number is over 5 million people per year.

Me: I can see the attraction. It's difficult to find a more beautiful place anywhere on earth.

God: I'm quite proud of it, after all...I did create it!

Me: Don't brag...but nice job! Now let's get back to the conspiracy story. What was found in the Grand Canyon and why has it remained such a hidden mystery?

God: Secrets from the past were found there. Secrets that your controllers do not want you to know about. Secrets that may cause them to lose their control over you so they have been hidden.

Me: Like the secret gold I've heard about?

God: Yes, there are massive amounts of gold in the Grand Canyon but that's not all. There are remnants of ancient civilizations that lived within the Grand Canyon long before modern man was around. Much of what was found within the canyon resembles those found in Egypt today.

Me: Egypt? You mean like clay pots and artifacts?

God: No. I mean like huge pyramids, hieroglyphics, golden statues, temples and mummies!

Me: What? That's hard to believe even though I have heard the rumors of such things discovered there.

God: Look at a geographical map of the Grand Canyon and you will find many mountains and peaks that resemble and are even named after Egyptian gods.

Me: So there are ancient pyramids within the Grand Canyon that they are not telling us about just like the ones that are being found in Bosnia today?

God: Yes, there are thousands of pyramids located all around the world on every continent. Many are so old and worn down that they just look like regular mountains.

Me: That's awesome! Here's a question: if they are hiding these structures in the Grand Canyon, then why do they give them Egyptian names like the Tower of Ra, the Isis Temple, the Horus Temple, the Tower of Set and the Osiris Temple? Why wouldn't they name them after sacred American Indian sites or something more in line with the propagated story line?

God: This area was not always meant to be a secret from the people. It wasn't hidden until a decision was made to hide the gold deposits that were found there.

Me: It just blows my mind to think that an ancient Egyptian civilization lived in the Grand Canyon.

God: Or is it that an ancient civilization in the Grand Canyon later settled in Egypt? After all, the pyramids in the Grand Canyon likely predate those in Egypt by thousands of years.

Me: So cool. Did they really find mummies there? Can I see one?

God: Yes, you can if you want. Just get in your car, drive into the Arizona desert and you can see a real life mummy hidden in plain sight.

Me: What? Where?

God: If you have ever driven to Arizona on Interstate Highway 10 you must have heard of "The Thing."

Me: Ha! Of course I have. There are signs for "The Thing" all along the highway. It's like those signs that say "Visit the largest ball of string in the world...only \$5!" They are gimmicks to suck some money out of tourists.

God: Many are, but once you understand the background of the Egyptian artifacts found in the Canyon you may have a different opinion about "The Thing." Do you know what it is?

Me: I do! I saw it on a Road Trip my family took when I was a young boy. At the time, I thought it was just a beat up old mummy and was no big deal but given all these clues – this is a huge deal if it's not a hoax.

God: Does it look like a hoax?

Me: Not really. It just looks old and like it's falling apart.

God: It's not a hoax. It's a real mummified human from a time long before modern day man settled in the Grand Canyon. It is another piece of the Egyptian/Grand Canyon puzzle.

Me: Just think, a random roadside tourist trap in Arizona is showing a real mummy from the Grand Canyon that the Smithsonian won't even allow to be shown in a museum!

God: Pretty cool.

Me: What about all the gold I heard about that was found in the Grand Canyon? Is it true? Was it really the largest gold deposit in history and is still sitting there just waiting to be mined by the United States?

God: Yes, the discovery of vast amounts of gold in the Grand Canyon has shaped the financial markets for the last 100 years.

Me: How so?

God: At the time the gold was found in the early 1900's, the entire world was operating on a Gold Standard. Gold coins were used as money and gold bars were used to store wealth in vaults all around the world.

Me: But the gold deposit found in the Grand Canyon was massive. More than had ever been discovered in human history. I heard it was MILLIONS of TONS of gold at a time when there was less than 100,000 tons of gold in circulation.

God: Yes, and if this new supply of gold were to be introduced into the global monetary supply those that held the wealth and power at the time would have seen their fortunes instantly devalued. This is true for the wealthy as well as the poor. Anyone who participated in the monetary system at the time would have felt the effects of a massive monetary devaluation.

Me: That sounds like it would have been very disruptive to society.

God: That is exactly what the rich and powerful told the decision makers in the United States. It was also the reason that the bankers were allowed to

establish the Federal Reserve system – to control the value of gold/money until such time they could figure out what to do about this large amount of gold.

Me: That is very interesting and it's all starting to make sense why the US has been allowed to print so much un-backed fiat money over the past 100 years...they had the physical gold to back it if they ever needed it.

God: This is true. Over the years the US has issued billions of dollars worth of gold backed bonds and made many treaties related to the gold deposits in the Grand Canyon. They even made a deal with American Indian tribes because the gold was located on Sacred Indian Ground and the Native Americans were the actual owners of the property where the gold was discovered.

Me: Really? What kind of deal?

God: Why do you think gambling licenses are issued and casinos built on Indian Reservations in the United States? It is payment for them handing over their mining rights on their Sacred Lands.

Me: No wonder! Those gambling permits make the Indian Tribes MILLIONS!

God: No...BILLIONS.

Me: I always wondered about that. I thought it was because the “White Man” treated the American Indians so badly when we settled in America. I had no idea that it wasn't “payback” but rather “futures payments” for the production of gold out of the Grand Canyon.

God: That's a very good way to put it in this world of derivative Ponzi Schemes!

Me: Can anybody go exploring in the Grand Canyon and maybe even find the gold?

God: No. It is carefully guarded by the US Marines and has been for over 100 years.

Me: You mean there are places in the Grand Canyon that are off limits to the public and guarded by Marines?

God: Yes, but not only the general public is prohibited. US Presidents from Bush to Clinton to Obama have all tried to get their hands on the gold by opening the mining rights but they have been turned away every time.

Me: You mean this is even bigger than the President of the United States?!

God: Yes. It is guarded and controlled by those who have sworn to protect the US Constitution and the freedoms of the United States of America. They will never be corrupted and will guard this treasure until it is time to return to a Constitutional Gold Standard within a FREE United States of America.

Me: You mean the United States AFTER the crash.

God: Exactly, after the crash the Golden Secrets will be revealed and the new monetary system will be available with plenty for all.

Me: That's so cool! 100 years of hiding the greatest secret treasure of all time only to be released to We the People at the very time it is needed most.

God. Yes – so cool!

END

Chapter XIX

The Best Policy

God: May I make a suggestion?

Me: Of course, anything can help us these days.

God: As you move forward through the transition try to solve problems and create solutions with truthfulness and honesty. Make sure that those hiding the truth are exposed and that there are no more hidden secrets or agendas. When constructing your new systems, make sure that all your new

rules, regulations and operations are founded on truthfulness and honesty. It will make life a lot easier.

Me: So honesty really IS the best policy.

God: Yes, but it is more than that. It is simple.

Me: What do you mean?

God: Honesty doesn't require a lot of explanation. It doesn't need thousands of laws, rules and regulations to make sure the system runs smoothly. It is straightforward and you can trust your new systems if they are founded on truthfulness and honesty.

Me: So how can we build honesty into our markets after the crash?

God: Make them transparent to all and make them accountable to the People. There is no need for secrets in a truly honest and free market. Build your new markets and exchanges on an honest foundation and there will be no need for the kinds of rules and regulations that permeate your system today. Nor will there be a need for regulators.

Me: You mean there will be no need for the Federal Reserve, the SEC or the CFTC? Seems like it would give free reign to those who want to game the system, especially in the markets and exchanges.

God: They can't game an open and honest system. Everybody would know what the others are doing and would not allow it.

Me: What do you mean everyone will know? Markets always have secrets and traders have always used these secrets to make money.

God: An honest system would not allow secrets.

Me: You mean everybody would know what everyone else holds and trades? They would know who was trading, what amounts they are trading and how much of what each person holds?

God: Yes, in an open and honest market there are no secrets.

Me: Interesting concept but I doubt that large market makers would agree to have such transparency.

God: Then they would not be allowed to participate in the markets.

Me: Ha! Good luck to us if we try to set up a system like that. They would never allow it.

God: You will find that the old rules they created will be very easy to change once their old system is destroyed. People will understand why the old system failed and be sure not to let the old problems leak back into the new systems you create. The old leaders and controllers of your markets will not be the ones creating the new systems.

Me: Let me get this straight. After the crash we will have an opportunity to create a system that takes away all the bad parts of the old system and incorporate new and better procedures for the new system.

God: Yes, of course. And my suggestion is that when you are structuring the new system, try to base the new structure on a foundation of truthfulness and honesty.

Me: But it's not just the market controllers and regulators that are causing all the problems. Our elected officials are just as corrupt and it's almost impossible to find an honest politician these days. They are basically paid by the market controllers to make sure that their system is not interfered with or shut down. The politicians are just as guilty as the market riggers.

God: Then get rid of them and elect new politicians that will uphold the basic principles we are discussing: truthfulness and honesty.

Me: How can we tell if our elected officials are being honest?

God: That's easy. Honesty doesn't require eight hours of Congressional testimony to get to the truth. Honesty doesn't know the terms "I don't recall" or "As far as I remember". Honesty is short and to the point, and there is no need for longwinded explanations or justifications.

Me: “The truth will set you free.”

God: And send the crooked politicians to jail.

Me: Is that why the old system is failing now? It isn't truthful and it isn't honest?

God: It became that way, yes.

Me: Let's say that we do construct a new system based on truthfulness and honesty. Will that ensure that it will work for us in the long run?

God: The “long run” is a very long time and like all systems, it will be corrupted at some point.

Me: So why bother?

God: Because it is a terrific problem to solve at this point in time! People are wondering why their system isn't working and I am telling you that it's because it wasn't based on truthfulness and honesty. Correct those problems and move on to the next experience. You will find it very fulfilling and very liberating.

Me: I suppose so.

God: You KNOW SO, Bix.

Me: Ok. I know so, but let's say that we can accomplish putting together a system where everything is open and honest and where all people are treated fairly, what's next?

God: Then everyone can move on to other things that interest them; the things that they really *want* to do and not *have* to do. If you are starting from a strong foundation you will find that amazing possibilities open up and are allowed to bloom right before your eyes.

Me: The “World is our Oyster!”

God: No Bix, the “UNIVERSE is your Oyster!” There are no limitations when the shackles of lies and control are removed. You will learn about all that you were kept from knowing.

Me: You mean like the things all those “woo-woo” people talk about: Hidden Technologies, ET Disclosure and Ascension to a higher vibration? All the airy-fairy things that most people believe are just New Age mumbo jumbo?

God: Yes, all the “mumbo jumbo” will no longer be hidden in an honest and truthful system. The time for lies and hidden secrets will be over. There will be nothing withheld because those who controlled you will have been removed. There is so much that will be revealed to humanity that you will find very, very interesting and beautiful and truly astounding.

Me: I’m so excited! It would be an amazing place to live with unlimited opportunities to learn and explore and grow.

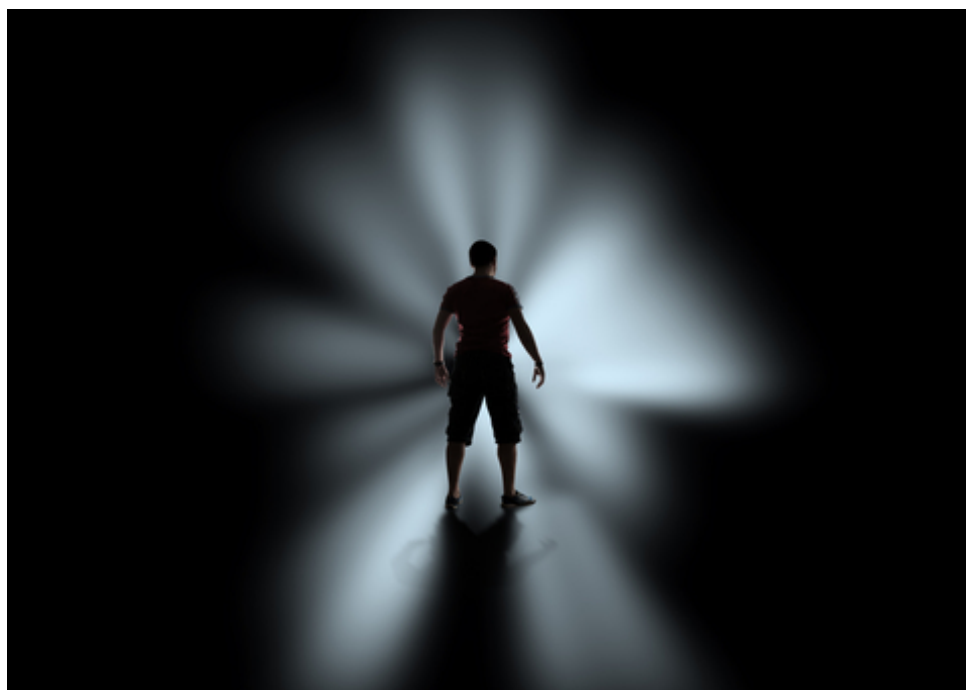

God: Yes, it will be amazing and it will be very different from what humans have to deal with today.

Me: I think we are ready for it. I know I am.

God: And so it is time.

END

Chapter XX

Darkness in Transition

Me: There is an urgency to release this book now isn't there.

God: Yes, there is urgency for you to get this book out at this point in the transition process. Much of what you discuss in both of your books is manifesting as we speak and it seems the universe is pushing the process forward.

Me: Yes, I think it is time and the transition is clearly coming to a head. How long will it take for it to happen?

God: How long will it take for what to happen?

Me: How long will it take for the transition to be over?

God: Many lifetimes.

Me: No, I mean how long will it take for the chaos to be visible, the destruction to be finished and for us to move on.

God: Again, many lifetimes.

Me: Really? I thought this could be a quick process.

God: It is possible for the really big things to happen quickly but the transition will last many lifetimes.

Me: Ok, just the big stuff. How long will it take for the big stuff to play out?

God: Be more specific.

Me: How long will the economic crash take and how long will it take for us to be back on our feet again?

God: The timing is really up to you and whatever timeline you desire to fulfill your planned goals.

Me: You are so difficult when pinning down timeframes! Let's try this: give me a number that you think I would create for the amount of time the transition will take to manifest.

God: Six months for the big stuff, and four years for the rest.

Me: Do you mean six months of full-on chaos and four years to get everything operating smoothly again?

God: Not necessarily "full-on chaos" but a good six months for all the Bad parts of the current system to get washed away and four years for the Good parts of a new system to be implemented.

Me: I'm scared.

God: Don't be scared! Fear is what got humans into this mess in the first place. Be strong and defiant and heroic. That's what others need you to be at this point in the transition. Set an example. Explain everything you know about what is going on to the world. Explain why a new system is needed and how a new system would be beneficial going forward.

Me: Me? Why me?

God: It seems to me that your life's path has followed this mission so far, right? Your path has led you to help others understand what was bad about the past. Your work on the Road to Roota has made that very clear. Now bring it forward to help people create the new system. The Road to Roota Theory can help the world understand the past and what may work going forward.

Me: I guess so but I doubt that what I have to say would have a large impact on the way the world handles the transition.

God: STOP IT!! What you do does have a profound effect on the way things will turn out! You and everyone like you that has battled the Bad Guys for so long are just getting a foot hold in the consciousness of the public. Now is not the time to doubt yourself. Now is the time to STEP IT UP!!

Me: Really? Do you really think that we've made a difference?

God: Of course you have and if you continue to follow this Road you will make an even BIGGER difference going forward.

Me: That makes me feel very good.

God: And it should.

Me: So what can I do from here? What should I focus on?

God: The transition is headed into a very DARK time and people need a glimmer of HOPE to lead the way.

Me: That's strange because I've had many people tell me that the Road to Roota Theory and my work are very positive messages whereas most in the conspiracy world talk of a dark and gloomy future.

God: The truth is very enlightening Bix.

Me: Ha! But I never thought of my message as being a positive light. I thought that telling people that they were about to lose every "asset" they owned was a horrible message to put forward. I always struggled with people who said the Road to Roota Theory was a positive spin on our potential future.

God: I know you have but the world has plunged so deep into the darkness that only the truth can light the way forward. You are telling the world the truth about what happened in the past, about how it can play out in the transition and about how it can end in a very positive place.

Me: I guess so. Should I just keep on telling people about the Road to Roota Theory or should I move on to other pressing issues.

God: Do what you have always done in the past...let your instincts and research guide you to where you need to be. Don't let others sway your stream of consciousness one way or another. Lead with your heart and your head and you will provide a bright light in a very dark world.

Me: I always have stayed true to my beliefs. Even when others told me I was wrong and/or crazy I have always written and spoken about what I believed to be the truth.

God: Yes, you have. And where are those who told you that your theories were crazy?

Me: Many are stuck in the past waiting for their mining shares to rise or watching the artificial prices of gold and silver rise and fall. Many have not understood what was going on with computer price manipulation and continue to be frustrated by the prices of the assets they bought.

God: But you are still a believer in gold and silver, aren't you?

Me: Yes! Very much so but the price action no longer effects my thoughts and emotions. Once I learned that the market manipulators could place the price of either metal at \$1M per ounce or \$0 per ounce with a click of a mouse I stopped watching the price and focused on the End Game.

God: And what is that End Game for gold and silver, Bix?

Me: The end of computer price manipulation, and the introduction of a freely traded market where gold and silver prices reflect their true “Fair Market Value”.

God: And do you think that day will ever come?

Me: Yes. I know it will. I have designed it to happen during my experience here on Earth and in my lifetime. I am creating this experience remember?!

God: Of course I do. I was just making sure that you did.

Me: I do now.

God: Very well.

Me: I am sensing our conversation is over once again.

God: I believe you have enough to get you through the next few months. Get these conversations out to the public as soon as you can. They will help in supporting the transition.

Me: I plan to God. Will we speak again?

God: Anytime you would like. I am always here.

Me: Thank for everything.

God: You are welcome for everything.

SUBJECT: “It is our Right, It is our Duty”

Looking at the bright side of things can be a very difficult thing to do at times. In the United States of America, it has never been harder than right now.

We are being stripped of our liberty, our freedom and our assets. Our governing bodies are all bought and paid for and our land, water and food is purposefully being polluted and destroyed. Our controllers are even forcing our nation’s will upon other nations and other people who want as much to be free in their own countries as we do. There has never been a worse time to be living as a citizen of the United States of America.

Having said that, there has not been a better time in the history of our country where the will and desire of We The People to overthrow our leaders has been stronger in over 200 years! We still *think* we are FREE People and with that

GIANTS' SKELETONS FOUND.

Cave in Mexico Gives Up the Bones of an Ancient Race.

Special to The New York Times.

BOSTON, May 3.—Charles C. Clapp, who has recently returned from Mexico, where he has been in charge of Thomas W. Lawson's mining interests, has called the attention of Prof. Agassiz to a remarkable discovery made by him.

He found in Mexico a cave containing some 200 skeletons of men each above eight feet in height. The cave was evidently the burial place of a race of giants who antedated the Aztecs. Mr. Clapp arranged the bones of one of these skeletons and found the total length to be 8 feet 11 inches. The femur reached up to his thigh, and the molars were big enough to crack a cocoanut. The head measured eighteen inches from front to back.

EXPLORATIONS IN GRAND CANYON

**Mysteries of Immense Rich
Cavern Being Brought
to Light.**

JORDAN IS ENTHUSED

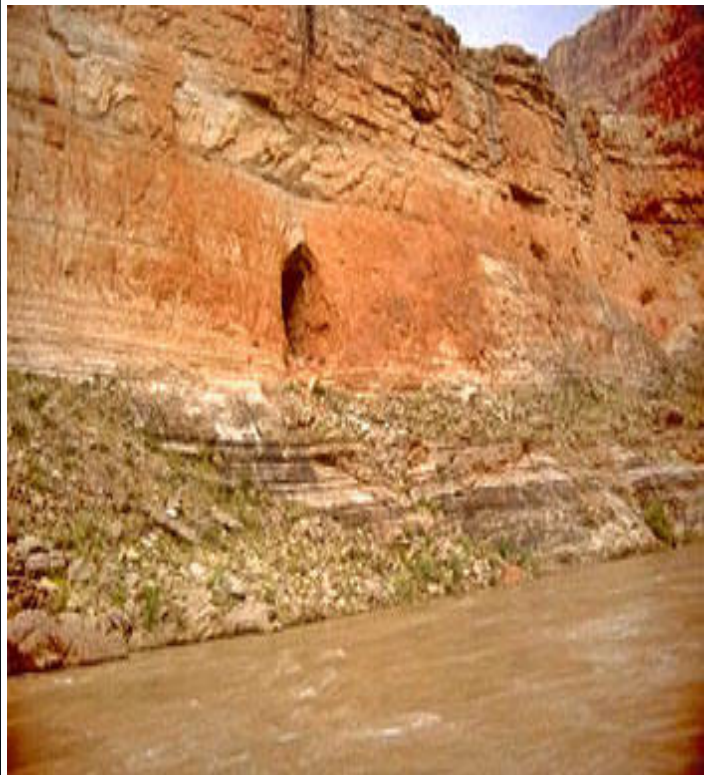

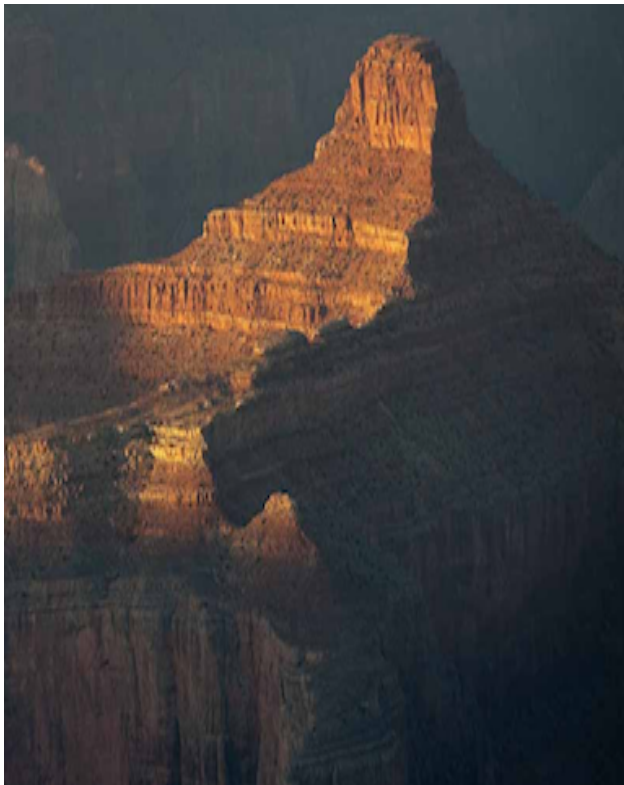

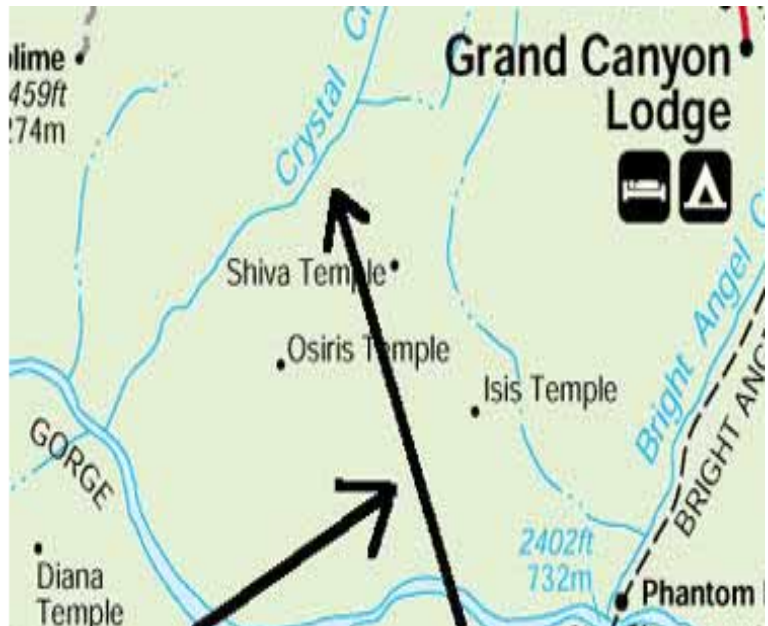

**Remarkable Finds Indicate
Ancient People Migrated
From Orient.**

The latest news of the progress of the explorations of what is now regarded by scientists as not only the latest archaeological discovery, but the

feet ventilation of the cavern, the steady draught that blows through, indicates that it has another outlet to the surface.

Mr. Kinkaid's Report.
Mr. Kinkaid was the first white child born in Idaho and has been an explorer and hunter all his life, thirty years having been in the service of the Smithsonian Institute. Even briefly recounted, his history sounds fabulous, almost grotesque.

"First, I would impress that the cavern is nearly inaccessible. The entrance is 1185 feet down the sheer canyon wall. It is located on government land and no visitor will be allowed there under penalty of trespass. The scientists wish to work unmolested, without fear of the archaeological discoveries being disturbed by curio or relic hunters. A trip there would be foolhardy, and the visitor would be sent on his way. The story of how I found the cavern has been related, but in a paragraph. I was journeying down the Colorado river in a boat, alone, looking for mineral. Some forty-two miles up the river from the El Tovar Crystal Canyon I saw on the east wall, steins in the sedimentary formation about 2300 feet above the river bed. There was no trail to this point, but I finally reached it with great difficulty. Above a shelf which hid it from view from the river, was the mouth of the cave. There are stairs leading from this entrance some thirty yards to what was, at the time the cavern was inhabited, the level of the river. When I saw the old hieroglyphs on the wall inside the entrance, I became interested, secured my gun and went in. During that trip I went back several hundred feet

The Road to Roota Letters

by Bix Weir

"May the Road you choose be the Right Road"

About the author:

Bix Weir has 30 years experience in the financial industry with various fortune 500 companies. He is the creator of the "Road to Roota Theory" and his commentary and analysis are published at www.RoadtoRoota.com. Bix is a frequent guest on alternative media talk shows and is a featured speaker at the annual Silver Summit in Spokane, Washington.

Over the last 15 years Bix has dedicated his efforts to exposing the long-term manipulation of the gold and silver markets. He has worked closely with the Gold Anti-Trust Action Committee (GATA) helping to pull the curtain away from the Cabal of international bankers that has taken control of our free market system.

At RoadtoRoota.com Bix deals with the conspiracy and manipulation side of the gold, silver and financial markets and is not constrained by conventional thinking of how market prices fluctuate. Bix has developed this website to aid in the discovery of the truth behind our massively manipulated markets and to help expose those who threaten our free market system.
